NEW QUESTION: 1If more than one Avaya Breeze node is available in the cluster, which statement about redundancy and load- balancing is true?**A.** The list of all Avaya Breeze nodes SM100 IP addresses must be configured in the client.**B.** IM clients point to the Leader Avaya Breeze node SM100 IP address which redirects the clients to a particular Avaya Breeze node based on load-balancing policy.**C.** IM clients point to any Avaya Breeze node SM100 IP address. The client is dynamically informed of alternate Avaya Breeze nodes in the cluster.**D.** The Cluster IP address is not used for Presence Services in 7.0. IM clients configure a FQDN instead of IP address which is resolved by a DNS server to all Avaya Breeze nodes in the cluster.**Answer: B**
Explanation:Enable load balancing for a cluster if you want to scale the HTTP services without targeting a particular Avaya Breeze server. All the requests are sent to the cluster IP address. When you enable load balancing, two Avaya Breeze servers are chosen as the active and standby load balancing servers. The active load balancer distributes the HTTP requests to all the other servers in the cluster in a round robin fashion.References: Administering Avaya Breeze, Release 3.1 (May 2016), page 16
