In this question, we need to modify the Lync address. Lync addresses are notated by placing SIP: in front of the address whereas Exchange email addresses are notated by placing SMTP: in front of the address. In the PowerShell script: The \$ID variable is used to store the users identity. The \$OldAddress variable is used to store the users old Lync address SIP:[\[email protected\]](#). The \$NewAddress variable is used to store the users new Lync address SIP:User1-[\[email protected\]](#). In the following PowerShell command: Set-Mailbox -Identity \$ID -EmailAddresses@{add = "\$NewAddress"; remove = "\$Old Address"} The EmailAddresses parameter adds the new address by (add = "\$NewAddress") and removes the old address (remove = "\$Old Address") thus changing the Lync address as required in the question.
