Even newbies will be tricky about this process on the CDMP-RMD exam questions.

NEW QUESTION: 1Distributed File System (DFS) is used to:**A.** Group shared folders from different servers.**B.** Delegate permissions to a global distribution group.**C.** Implement parity.**D.** Configure spanned and extended volumes.**Answer: A**Explanation:Explanation/Reference: Distributed File System (DFS) is a set of client and server services that allow an organization using Microsoft Windows servers to organize many distributed SMB file shares into a distributed file system. DFS provides location transparency and redundancy to improve data availability in the face of failure or heavy load by allowing shares in multiple different locations to be logically grouped under one folder, or DFS root.

NEW QUESTION: 2Your company identifies the following business continuity and disaster recovery objectives for virtual machines that host sales, finance, and reporting application in the company's on-premises data center.*The finance application requires that data be retained for seven years. In the event of a disaster, the application must be able to run from Azure. The recovery in objective (RTO) is 10 minutes,* The reporting application must be able to recover point in-time data at a daily granularity. The RTO is eight hours.*The sales application must be able to fail over to second on-premises data center.You need to recommend which Azure services meet the business community and disaster recovery objectives.The solution must minimize costs.What should you recommend for each application? To answer, drag the appropriate services to the correct application. Each service may be used owe. More than once not at an You may need to drag the spin bar between panes or scroll 10 view content.**Answer:** Explanation:Explanation

NEW QUESTION: 3**A.** Option B**B.** Option E**C.** Option A**D.** Option C**E.** Option D**Answer: B,C** Explanation:Event Details:

NEW QUESTION: 4As a test analyst you are involved in the early stages of an acceptance test for a Product Data Management system. You are asked to write test designs and test cases based on use cases. An early version of the system is also already available. It is a known fact that on the implementation level many things will change (including the user-interface). The tests will be carried by end-users with much domain knowledge who have also been involved in

the project defining the user requirements and reviewing documentation. What is the BEST option regarding the level of detail and documentation required for test cases in the project? [K4] 3 credits

A. Logical test cases only since the end-user have extensive domain knowledge and many changes are expected thus reducing testware maintenance effort

B. Detailed concrete test cases since many re-runs of the tests are expected

C. Logical test cases supported by concrete test cases to allow for traceability and enable future changes

D. Concrete test cases only since the end-users have extensive domain knowledge

Answer: A
