**NEW QUESTION: 1**An application uses X509 certificates for data encryption and decryption. The application stores certificates in the Personal certificates collection of the Current User store. On each computer, each certificate subject is unique. The application includes a method named LoadCertificate. The LoadCertificate() method includes the following code. (Line numbers are included for reference only.) The LoadCertificate() method must load only certificates for which the subject exactly matches the searchValue parameter value. You need to ensure that the LoadCertificate() method loads the correct certificates. Which code segment should you insert at line 06?  
**A.** Option B  
**B.** Option D  
**C.** Option C  
**D.** Option A  
**Answer: B**  
Explanation: Explanation X509FindType.FindBySubjectDistinguishedName is a more specific search than that provided by the FindBySubjectName enumeration value. Using the FindBySubjectDistinguishedName value, the Find method performs a case-insensitive string comparison for the entire distinguished name. Searching by subject name is a less precise search. Reference: X509FindType Enumeration
