**NEW QUESTION: 3** You are developing an ASP.NET Core MVC web application. The application will use Entity Framework Core and a SQLite database. You rename a property in the Customer data model. You attempt to apply the migration to the SQLite database and receive a NotSupportedException error that includes a table named Customer. You need to resolve the migration error. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. **Answer:** Explanation: Explanation The SQLite provider has a number of migrations limitations. You can work around some of these limitations by manually writing code in your migrations to perform a table rebuild. A table rebuild involves renaming the existing table, creating a new table, copying data to the new table, and dropping the old table.
