**NEW QUESTION: 1**The downlink cell reference signal belongs to a common signal, and all UEs can measure and evaluate.**A. FALSE B. TRUE****Answer: B**

**NEW QUESTION: 2**A user has created an ELB with the availability zone US-East-1A. The user wants to add more zones to ELB to achieve High Availability. How can the user add more zones to the existing ELB?**A.** It is not possible to add more zones to the existing ELB**B.** The user can add zones on the fly from the AWS console**C.** The only option is to launch instances in different zones and add to ELB**D.** The user should stop the ELB and add zones and instances as required**Answer: B****Explanation:**The user has created an Elastic Load Balancer with the availability zone and wants to add more zones to the existing ELB. The user can do so in two ways:From the console or CLI, add new zones to ELB;Launch instances in a separate AZ and add instances to the existing ELB.

**NEW QUESTION: 3**ネットワークには、Azure Active Directory (Azure AD) に同期するcontoso.comという名前のオンプレミスActive Directoryドメインが含まれています。次の表に示すように、contoso.comにユーザーがいます。ユーザーには、次の表に示すパスワードがあります。次の展示に示すように、パスワード保護を実装します。以下の各ステートメントについて、ステートメントが真である場合は「はい」を選択します。それ以外の場合は、「いいえ」を選択します。注：それぞれの正しい選択には1ポイントの価値があります。**Answer: Explanation:****Explanation**  
Box 1: NoUser1's password contains the banned password 'Contoso'. However, User1 will not be required to change his password at next sign in. When the password expires or when User1 (or an administrator) changes the password, the password will be evaluated and will have to meet the password requirements.  
Box 2: YesPassword evaluation goes through several steps including normalization and Substring matching which is used on the normalized password to check for the user's first and last name as well as the tenant name.Normalization is the process of converting common letter substitutes into letters. For example, 0 converts to o.\$ converts to s. etc.The next step is to identify all instances of banned passwords in the user's normalized new password. Then:  
\* Each banned password that is found in a user's password is given one point.  
\* Each remaining unique character is given one point.  
\* A password must be at least five (5) points for it to be accepted.'C0nt0s0' becomes 'contoso' after normalization. Therefore, C0nt0s0\_C0mplex123 contains one instance of the banned password (contoso) so that equals 1 point. After 'contoso', there are 11 unique characters.Therefore, the score for 'C0nt0s0\_C0mplex123' is 12. This is more than the required 5 points so the password is acceptable.  
Box 3:The 'Password protection for Windows Server Active Directory' is in 'Audit' mode. This means that the password protection rules are not applied. Audit mode is for logging

policy violations before putting the password protection 'live' by changing the mode to 'enforced'.Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad>

**NEW QUESTION: 4A.** 255.255.255.252**B.** 255.255.255.224**C.** 0.0.0.240**D.** 255.255.255.240**E.** 255.255.255.0**Answer: B**Explanation:For a class C network, a mask of 255.255.255.224 will allow for up to 8 networks with 32 IP addresses each (30 usable).
