NEW QUESTION: 3You have an Azure SQL database that has masked columns.You need to identify when a user attempts to infer data from the masked columns.What should you use?**A.** Transparent Data Encryption (TDE)**B.** Azure Advanced Threat Protection (ATP)**C.** auditing**D.** custom masking rules**Answer: C****Explanation:**Dynamic Data Masking is designed to simplify application development by limiting data exposure in a set of pre-defined queries used by the application. While Dynamic Data Masking can also be useful to prevent accidental exposure of sensitive data when accessing a production database directly, it is important to note that unprivileged users with ad-hoc query permissions can apply techniques to gain access to the actual data. If there is a need to grant such ad-hoc access, Auditing should be used to monitor all database activity and mitigate this scenario.References:
