NEW QUESTION: 1The technician is dispatched to a multi-function device that users print and copy from all day. The technician is told pages that are copied all have a line on them on the left hand side of the page. The technician prints a printer test page and does not see the line on the page. The technician's NEXT step would be which of the following?**A.** Print from another workstation to recreate the problem.**B.** Close the trouble ticket and document no trouble found.**C.** Replace the toner cartridge to eliminate the lines.**D.** Copy a printed page to recreate the problem.**Answer: D**

NEW QUESTION: 2In developing an emergency plan, program administrators must take into account all of the following factors EXCEPT**A.** Type of flooring.**B.** Type of electrical wiring.**C.** Types of exercise equipment.**D.** Ventilation, temperature, and humidity.**Answer: C**

NEW QUESTION: 3This question requires that you evaluate the underlined text to determine if it is correct.When BitLocker is enabled and protecting a local drive, Trusted Platform Module (TPM) provides "pre-start system integrity verification for system and operating system drives".Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice than makes the statement correct.**A.** 256-bit encryption that uses Advanced Encryption Standard (AES)**B.** a location that stores recovery keys for removable drives**C.** No change is needed**D.** boot sector mapping for the startup process**Answer: B**Explanation:ExplanationComputers that incorporate a TPM have the ability to create cryptographic keys and encrypt them so that they can be decrypted only by the TPM. This process, often called "wrapping" or "binding" a key, can help protect the key from disclosure. Each TPM has a root "wrapping" key, called the Storage Root Key (SRK), which is stored within the TPM itself. The private portion of a key created in a TPM is never exposed to any other component, software, process, or person.

NEW QUESTION: 4You are evaluating the connectivity between the virtual machines after the planned implementation of the Azure networking infrastructure.For each of the following statements, select Yes if the statement is true. Otherwise, select No.**Answer: Explanation:**ExplanationOnce the VNets are peered, all resources on one VNet can communicate with resources on the other peered VNets. You plan to enable peering between Paris-VNet and AllOffices-VNet. Therefore VMs on Subnet1, which is on Paris-VNet and VMs on Subnet3, which is on AllOffices-VNet will be able to connect to each other.All Azure resources connected to a VNet have outbound connectivity to the Internet by default. Therefore VMs on ClientSubnet, which is on ClientResources-VNet will have access to the Internet; and VMs on Subnet3 and Subnet4, which are on AllOffices-VNet will have access to the Internet.References:
