Scale condition 2 and Scale condition 3 applies. Scale condition 3 takes precedence as it the largest increase in the number of instances. When you configure multiple policies and rules, they could conflict with each other. Autoscale uses the following conflict resolution rules to ensure that there is always a sufficient number of instances running: * Scale-out operations always take precedence over scale-in operations. * When scale-out operations conflict, the rule that initiates the largest increase in the number of instances takes precedence. * When scale in operations conflict, the rule that initiates the smallest decrease in the number of instances takes precedence.
