**NEW QUESTION: 2** How frequently are Technology Level updates released for AIX v6.1 and later? **A.** Every 18 months **B.** Every 6 months **C.** Every 24 months **D.** Every 12 months **Answer: D**

**NEW QUESTION: 3** Marge wants to track user preference information while users navigate through her Web site, but does not want to require users to authenticate when accessing the site. Which of the following should she use to track the user information? **A.** The user must authenticate **B.** Cookies **C.** User profile documents **D.** Servlets **Answer: B**

**NEW QUESTION: 4** An advantage of the net present value method over the internal rate of return model in discounted cashflow analysis is that the net present value method: **A.** Uses discounted cash flows whereas the internal rate of return model does not. **B.** Uses a discount rate that equates the discounted cash inflows with the outflows. **C.** Computes a desired rate of return for capital projects. **D.** Can be used when there is no constant rate of return required for each year of the project. **Answer: D** Explanation: Choice "b" is correct. When using the net present value method of capital budgeting, different hurdle rates can be used for each year of

the project. Choice "a" is incorrect. The desired rate of return for capital projects is established by management. Choice "c" is incorrect. The internal rate of return determines the discount rate that will equate the discounted cash inflows with the outflows, thus resulting in no gain or loss (breakeven). Choice "d" is incorrect. Both the net present value method and the internal rate of return model are discounted cash flow methods.
