NEW QUESTION: 1Which statement about the BGP synchronization rule is true?
A. A BGP router with synchronization enabled does not advertise its eBGP learned routes to its iBGP peers unless it has learned or verified this route on its routing table through an IGP.
B. A BGP router with synchronization enabled does not advertise its iBGP learned routes to its iBGP peers unless it has learned or verified this route on its routing table through an IGP.
C. A BGP router with synchronization enabled does not advertise its eBGP learned routes to its eBGP peers unless it has learned or verified this route on its routing table through an IGP.
D. A BGP router with synchronization enabled does not advertise its iBGP learned routes to its eBGP peers unless it has learned or verified this route on its routing table through an IGP.
Answer: D

NEW QUESTION: 2Refer to the exhibit. A data architect builds a simple data model to show the relationship between students and exams. The data is loaded. Every StudentID in the Exams table should be found in the Students table. Some students have NOT taken an exam. The data architect selects the field "StudentID" from the Students table and sees the following: A data architect needs to fix this anomaly. What should the data architect do to ensure data integrity?
A. Update the Students table and add 16.7% of the missing records
B. In the LOAD script, add DISTINCT before the Students and Exams tables
C. Update the Exams table and add 33.4% of the missing records
D. Remove records from the Exams table where StudentID is null
Answer: C

NEW QUESTION: 3
A. Option D
B. Option B
C. Option C
D. Option A
Answer: C
Explanation: Syslog is a protocol designed to send log entries generated by a device or process called a facility across an IP network to a message collector, called a syslog server. A syslog message consists of an error code and the severity of the error. A syslog server would enable the network administrator to view device error information from a central location.
