NEW QUESTION: 2You have an AlwaysOn availability group that has two replicas in Microsoft Azure. A full backup of the database is 3 TB. A transaction log backup occurs every 15 minutes. Each transaction log backup is 150 MB. All full and transaction log backups are created by using SQL Server Backup to URL. Your corporate network has a 20 MB/sec Internet connection dedicated to SQL Server replication. You plan to add an on-premises replica to the availability group. The replica will be used for reporting only. You need to copy the backups from Azure to the corporate network to ensure that you can initialize the on-premises replica as quickly as possible. The solution must minimize disruption to the backups. Which technology should you use for each type of backup? To answer, drag the appropriate technologies to the correct backup types. Each technology may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.
