Create one Auto Scaling group behind each ALB Use Amazon Route 53 to route to different ALBs depending on the User-Agent HTTP header**D.** Create separate Auto

Scaling groups based on device types Switch to a Network Load Balancer (NLB) Use the User-Agent HTTP header in the NLB to route to a different set of EC2 instances.**Answer: A**

NEW QUESTION: 3Your company has a main office and five branch offices. The branch offices connect to the main office by using a WAN link.Each branch office has 100 client computers that run Windows XP or Windows Vista. All servers run Windows Server 2008 R2.The main office has a Windows Server Update Services (WSUS) server.You need to minimize the amount of WAN traffic used to download updates from the WSUS server.What should you do?**A.** From Windows Explorer, enable Offline Files.**B.** From a Group Policy, enable the Set BranchCache Hosted Cache mode setting.**C.** From a Group Policy, enable the Set BranchCache Distributed Cache mode setting.**D.** From a Group Policy, enable Allow BITS Peercaching.**Answer: D****Explanation:** Windows Update and Microsoft Update use the Background Intelligent Transfer Service (BITS) to download updates. You can optimize download performance by configuring BITS through Group Policy.Peer caching is a feature of BITS that enables peer computers to share files. Peer computers are computers that have the peer caching feature enabled and that are located in the same subnet. If peer caching is enabled on a computer, Automatic Updates instructs BITS to make downloaded files available to the computer's peers. When updates are downloaded, BITS caches them. When another peer caching-enabled computer tries to download the same update, BITS sends a multicast request to all peers. If peer computers respond to the request, BITS downloads the file from the first peer computer to respond. If the download from the peer computer fails or take too long, BITS continues the download from the WSUS server or from Microsoft Update.Peer caching can optimize bandwidth in the following ways:-Decreases the data that is transferred from the WSUS server to client computers because computers in the same subnet will usually download the updates from each other.-Decreases the data that is transferred across the WAN when some or all of the client computers of a WSUS server are located in different locations.-Decreases the data that is transferred across the Internet if WSUS client computers that are located in the same subnet are configured to download updates from Microsoft Update. NEW QUESTION: 4As an implementation consultant, you are involved in the migration activity. If, during the premigration stage, the duplicate person records are merged, can you state the reason for this?**A.** because person records are dependent on legislation**B.** because person records are global in Fusion**C.** because one person can have only one work relationship**D.** because person records are not Global in fusion**Answer: B****Explanation:**A single global person record tracks information for employees or contingent workers. The single person record may then be associated with multiple work relationships in the employment model. This increases data integrity while reducing administrative overhead and provides for enhanced reporting capabilities.Reference: Oracle Fusion Human Capital Management, Oracle Data Sheet
