NEW QUESTION: 1Which statement regarding Cisco Nexus 5000 Series switches is true?**A.** Cisco Nexus 5000 Series switches operate in fabric mode.**B.** Cisco Nexus 5000 Series switches operate in r routing mode.**C.** Cisco Nexus 5000 Series switches operate in NPV mode.**D.** Cisco Nexus 5000 Series switches operate in FCoE mode.**Answer: A**

NEW QUESTION: 2Refer to the exhibit.Which statements are true about the subswitch ID that is filled in the header? (Choose three.)**A.** FabricPath switches running vPC+ use this field to identify the specific vPC+ PortChannel on which traffic is to be forwarded.**B.** The subswitch ID field is locally significant to each vPC+ switch pair.**C.** In the absence of vPC+, this field is set to 0.**D.** FabricPath switches running vPC use this field to identify the specific virtual switch.**E.** The subswitch ID field must be unique within the FabricPath domain.**Answer: A,B,C****Explanation:**In releases prior to NX-OS 6.1(2), the sub-switch ID (sSID) field identifies the source or destination VPC+ port-channel interface associated with a particular VPC+ switch pair. FabricPath switches running VPC+ use this field to identify the specific VPC+ port-channel on which traffic is to be forwarded. The sSID value is locally significant to each VPC+ switch pair. Note that, because this field is 8 bits, using the sSID to identify VPC+ port-channels imposes a limit of roughly 250 VPC+ port-channels per VPC+ switch pair (244 to be precise).Reference:

NEW QUESTION: 3**A.** Option **D**. Option **A**. Option **C**. Option **B****Answer: B,D****Explanation:**The vsphere.local domain includes several predefined groups. Assign users to one of those groups to be able to perform the corresponding actions.For all objects in the vCenter Server hierarchy, permissions are assigned by pairing a user and a role with the object. For example, you can select a resource pool and give a group of users read privileges to that resource pool by giving them the corresponding role.For some services that are not managed by vCenter Server directly, privileges are determined by membership to one of the vCenter Single Sign-On groups. For example, a user who is a member of the Administrator group can manage vCenter Single Sign-On. A user who is a member of the CAAdmins group can manage the VMware Certificate Authority, and a user who is in the LicenseService.Administrators group can manage licenses. Reference:
