**NEW QUESTION: 1**After a ransomware attack, you are asked to block known ransomware file extensions and to recover encrypted files. In this scenario, which two native NetApp Cloud Volumes ONTAP technologies will remediate the attack?(Choose two.)**A.** NetApp Storage Encryption**B.** FPolicy**C.** Snapshot policy**D.** NetApp Volume Encryption**Answer: B,D**

**NEW QUESTION: 2**An application must validate postal codes for Canadian customers to match the pattern A1A 1A1, where A represents a letter and 1 represents a number. Which two configuration options allow you to ensure that a user provides a valid postal code? (Choose Two)**A.** Configure a dropdown control to select the postal code based on the specified city and province.**B.** Configure a validate rule to test that the entered postal code conforms to the required pattern.**C.** Configure the postal code field as a text property with a required input field.**D.** Configure an edit validate rule to test that the entered postal code conforms to the required pattern.**Answer: A,B**

**NEW QUESTION: 3****SIMULATION**Click to expand each objective. To connect to the Azure portal, type <https://portal.azure.com> in the browser address bar. When you are finished performing all the tasks, click the 'Next' button. Note that you cannot return to the lab once you click the 'Next' button. Scoring occur in the background while you complete the rest of the exam.

**Overview**The following section of the exam is a lab. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design. Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task. Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided. Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab. To start the lab You may start the lab by clicking the Next button. Another administrator attempts to establish connectivity between two virtual networks named VNET1 and VNET2. The administrator reports that connections across the virtual networks fail. You need to ensure that network connections can be established successfully between VNET1 and VNET2 as quickly as possible. What should you do from the Azure portal?

**Answer:** Explanation: See solution below explanation You can connect one VNet to another VNet using either a Virtual network peering, or an Azure VPN Gateway. To create a virtual network gateway Step 1 : In the portal, on the left side, click +Create a resource and type 'virtual network gateway' in search. Locate Virtual network gateway in the search return and click the entry. On the Virtual network gateway page, click Create at the bottom of the page to open the Create virtual network gateway page. Step 2: On the Create virtual network gateway page, fill in

the values for your virtual network gateway. Name: Name your gateway. This is not the same as naming a gateway subnet. It's the name of the gateway object you are creating. Gateway type: Select VPN. VPN gateways use the virtual network gateway type VPN. Virtual network: Choose the virtual network to which you want to add this gateway. Click Virtual network to open the 'Choose a virtual network' page. Select the VNet. If you don't see your VNet, make sure the Location field is pointing to the region in which your virtual network is located. Gateway subnet address range: You will only see this setting if you did not previously create a gateway subnet for your virtual network. If you previously created a valid gateway subnet, this setting will not appear. Step 4: Select Create New to create a Gateway subnet. Step 5: Click Create to begin creating the VPN gateway. The settings are validated and you'll see the "Deploying Virtual network gateway" tile on the dashboard. Creating a gateway can take up to 45 minutes. You may need to refresh your portal page to see the completed status. References: <https://docs.microsoft.com/en-gateway-howto-vnet-vnet-resource-manager-portal?>

**NEW QUESTION: 4** A developer is writing a Web service operation named `getQuote`. Select the proper code to obtain the HTTP Query String used in the request:

**A.** `@Resource private Resource context; Public String get Quote (String input String) { ((Message Context)context).get(MessageContext.QUERY_STRING); ...`

**B.** `public String get Quote (String input String, WebServiceContext wc) { wc.getMessageContext().get(MessageContext.QUERY_STRING); ...`

**C.** `@WebServiceContext private WebServiceContext context; Public String get Quote (String input String) { context.getMessageContext().get(MessageContext.QUERY_STRING); ...`

**D.** `@Resource private WebServiceContext context; Public String get Quote (String input String) { context.getMessageContext().get(MessageContext.QUERY_STRING); ...`

**E.** `public String get Quote (String input String, Message Context mc) { mc.get(MessageContext.QUERY_STRING); ...`

**Answer: D**
