NEW QUESTION: 1 Siehe Ausstellung. Der New Yorker Router ist mit statischen Routen konfiguriert, die auf die Standorte Atlanta und Washington verweisen. Welche beiden Aufgaben müssen ausgeführt werden, damit sich die Serial0 / 0/0-Schnittstellen der Router in Atlanta und Washington gegenseitig erreichen können? (Wähle zwei.) **A.** Konfigurieren Sie den Befehl `ipv6 route 2023 :: / 126 2012 :: 1` auf dem Atlanta-Router. **B.** Konfigurieren Sie den Befehl `Ipv6 route 2012 :: / 126 s0 / 0/0` auf dem Atlanta-Router. **C.** Konfigurieren Sie den Befehl `ipv6 route 2023 :: / 126 2012 :: 2` auf dem Atlanta-Router. **D.** Konfigurieren Sie den Befehl `ipv6 route 2012 :: / 126 2023 :: 2` auf dem Washington-Router. **E.** Konfigurieren Sie den Befehl `ipv6 route 2012 :: / 126 2023 :: 1` auf dem Washington-Router. **Answer: C, D** Explanation: The short syntax of static IPv6 route is: `ipv6 route <destination-IPv6-address> {next-hop-IPv6-address | exit-interface}`

NEW QUESTION: 2 Which of the following statements is true in relation to a normal mixture distribution: I. The mixture will always have a kurtosis greater than a normal distribution with the same mean and variance II. A normal mixture density function is derived by summing two or more normal distributions III. VaR estimates for normal mixtures can be calculated using a closed form analytic formula **A.** I, II and III **B.** I and II **C.** I and III **D.** II and III **Answer: B** Explanation: Normal mixtures have higher peaks, and therefore higher kurtosis than a normal distribution with an equivalent mean and variance. Therefore statement I is correct. The term 'normal mixture' literally means that - the distribution is derived by summing two or more normal distributions. Statement II is correct. One interesting thing to note about normal mixtures is that their mean and variances are just the weighted averages of the means and variances of their underlying component normal distributions. But their kurtosis is higher than that of either of the components. They are more peaked, and have fatter tails, a property that makes them useful in finance. Unfortunately there is no analytical formula for calculating VaR based on normal mixtures. However, we can back solve for VaR (using Excel's Solver, for example), given we know the density functions for the underlying normal distributions. Statement III is not correct.

NEW QUESTION: 3 Scenario 1: A network administrator is tasked! with enabling SO-WAN at three branch locations. A topology has been provided for reference. For each site, the administrator is having issues bringing edges online, as another administrator has gone ahead and created a configuration ahead of time. The organization has several branch sites- One is an Internet-only site and two are Hybrid locations with both internet and MPLS: The last location is MPLS only. There are hub data center locations in this environment as well. Please refer to the topology.Exhibit.An administrator is attempting to activate two Edge devices at the Chicago branch location. The local technician reports that the Edge devices are not coming online. The Edge devices have been plugged in, powered on, and connected to the correct circuits with an Enhanced HA setup.What should the local technician check first when troubleshooting the issue?**A.** Review the Orchestrator for HA misconfiguration issues.**B.** Verify the link light sequence of the HA ports.**C.** Review color of the LED.**D.** Verify beep sequence of the Edge devices.**Answer: B**
