**NEW QUESTION: 2**DRAG DROPYou develop a SQL Server Integration Services (SSIS) project by using the Project Deployment model.The project contains many packages. It is deployed on a server named Development1. The project will be deployed to several servers that run SQL Server 2012.The project accepts one required parameter. The data type of the parameter is a string.A SQL Agent job is created that will call the master.dtsx package in the project. A job step is created for the SSIS package.The job must pass the value of an SSIS Environment Variable to the project parameter.The value of the Environment Variable must be configured differently on each server that runs SQL Server. The value of the Environment Variable must provide the server name to the project parameter.You need to configure SSIS on the Development1 server to pass the Environment Variable to the package.Which four actions should you perform in sequence by using SQL Server Management Studio? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)**Answer:**

**NEW QUESTION: 3** You are experiencing performance issues with the database server. You need to evaluate schema locking issues, plan cache memory pressure points, and backup I/O problems. What should you create?  
**A.** a sys.dm\_exec\_session\_wait\_stats dynamic management view query  
**B.** an Activity Monitor session in Microsoft SQL Management Studio.  
**C.** a sys.dm\_exec\_query\_stats dynamic management view query  
**D.** a System Monitor report  
**Answer: A**  
**Explanation:** sys.dm\_exec\_session\_wait\_stats returns information about all the waits encountered by threads that executed for each session. You can use this view to diagnose performance issues with the SQL Server session and also with specific queries and batches. Note: SQL Server wait stats are, at their highest conceptual level, grouped into two broad categories: signal waits and resource waits. A signal wait is accumulated by processes running on SQL Server which are waiting for a CPU to become available (so called because the process has "signaled" that it is ready for processing). A resource wait is accumulated by processes running on SQL Server which are waiting for a specific resource to become available, such as waiting for the release of a lock on a specific record.
