NEW QUESTION: 1 To set Timers, URI Manipulation, and Header Manipulation that the Avaya Session Border Controller for Enterprise (SBCE) will use when signaling to the far-end server; a profile like "avaya-ru" is provided by default. When configuring the Server Configuration, you must link to which type of Global profile? **A.** Server Interworking **B.** Routing **C.** Topology Hiding **D.** Signaling
Answer: A
Explanation: Explanation The standard Avaya profile "avaya-ru" is cloned for the Call Server Interworking Profile. The Interworking function of the Global Profiles feature enables the SBCE to function in an enterprise VoIP network using different SIP protocols.

NEW QUESTION: 2 What are the two disadvantages of implementing Query Caching? **A.** Needs a lot of administrators' time **B.** Increased network traffic **C.** Storage space for cache **D.** Reduction in BI server processing time **E.** Cache results being old
Answer: C, E
Explanation/Reference: B: The problem with caching of any kind is how to deal with stale data. How you decide to deal with this depends on how time critical your business intelligence queries happen to be. OBIEE provides a wide variety of mechanisms for dealing with stale data. The cache can be purged automatically at intervals. Caching can be enabled selectively for individual physical tables, so that data in a frequently updated table is never cached. OBIEE provides a set of ODBC procedures that can be called when ETL processes complete to programmatically purge designated tables. But, by far the best way to selectively purge the cache is to use an event polling table. This table is populated by the client database whenever changes are made to any table (by an ETL process for a data warehouse or by a table-based trigger for an OLTP database). At specified intervals the BI Server polls this event polling table and deletes from its cache any query results that are dependent on the changed data. Incorrect answers: A: Processing time reduction is an advantage. D: Network traffic decreases with caching. E: Administration overhead is low.
