**D.** Client-side directive  
**Answer: D**

**NEW QUESTION: 2**Which of the following statements pertaining to ethical hacking is incorrect?  
**A.** Ethical hackers never use tools that have the potential of affecting servers or services.  
**B.** An organization should use ethical hackers who do not sell auditing, hardware, software, firewall, hosting, and/or networking services.  
**C.** Testing should be done remotely to simulate external threats.  
**D.** Ethical hacking should not involve writing to or modifying the target systems negatively.  
**Answer: A**  
**Explanation:** This means that many of the tools used for ethical hacking have the potential of exploiting vulnerabilities and causing disruption to IT system. It is up to the individuals performing the tests to be familiar with their use and to make sure that no such disruption can happen or at least should be avoided. The first step before sending even one single packet to the target would be to have a signed agreement with clear rules of engagement and a signed contract. The signed contract explains to the client the associated risks and the client must agree to them before you even send one packet to the target range. This way the client understand that some of the test could lead to interruption of service or even crash a server. The client signs that he is aware of such risks and willing to accept them. The following are incorrect answers: An organization should use ethical hackers who do not sell auditing, hardware, software, firewall, hosting, and/or networking services. An ethical hacking firm's independence can be questioned if they sell security solutions at the same time as doing testing for the same client. There has to be independence between the judge (the tester) and the accuse (the client). Testing should be done remotely to simulate external threats Testing simulating a cracker from the Internet is often time one of the first test being done, this is to validate perimeter security. By performing tests remotely, the ethical hacking firm emulates the hacker's approach more realistically. Ethical hacking should not involve writing to or modifying the target systems negatively. Even though ethical hacking should not involve negligence in writing to or modifying the target systems or reducing its response time, comprehensive penetration testing has to be performed using the most complete tools available just like a real cracker would. ## NEW QUESTION: 3A. PlenumB. UTPC. CAT5eD. STPAnswer: A

**NEW QUESTION: 4**You are working as a solution architect for an online retail store to create a portal to allow the users to pay for their groceries using credit cards. Since the application is not fully compliant with the Payment Card Industry Data Security Standard (PCI DSS), your company is looking to use a third party payment service to process credit card payments. The third party service allows a maximum of 5 public IP addresses at a time. However, your website is using Oracle Cloud Infrastructure (OCI) Instance Pool Auto Scaling policy to create up to 15 Instances during peak traffic demand, which are launched in VCN private subnets and attached to an OCI public Load Balancer. Upon user payment, the portal connects to the payment service over the Internet to complete the transaction. What solution can you implement to make sure that all compute Instances can connect to the third party system to process the payments at peak traffic demand?  
**A.** Whitelist the Internet Gateway Public IP on the third party service and route all payment requests through the Internet Gateway.  
**B.** Route payment request from the compute instances through the OCI Load Balancer, which will then be routed to the third party service.  
**C.** Route credit card payment request from the compute instances through the NAT Gateway. On the third-party services, whitelist the public IP associated with the NAT Gateway.  
**D.** Create an OCI Command Line Interface (CLI) script to automatically reserve public IP address for the compute instances. On the third services, whitelist the Reserved public IP.  
**Answer: B**  
**Explanation:** You can OCI Load Balancer for this solution which can you the Public IPs of Load balancer to Traffic to third party services which allows a maximum of 5 public IP addresses at a time. However, your website is using Oracle Cloud Infrastructure (OCI) Instance Pool Auto Scaling policy to create up to 15 Instances during peak traffic demand.
