NEW QUESTION: 2 A company is considering making material adaptations to its warehouse and equipment. These costs will be \$25,000,000 and will have a benefit period of 10 years. The income tax rate during this period will be 30%. The company is considering the effects of capitalizing the costs versus expensing the cost. Which of the following statements would be true?
I). If costs are capitalized, cash flows in years 2-10 will be higher by \$750,000.
II). If costs are expensed, cash flows in years 2-10 will be higher by \$750,000.
III). If costs are capitalized, there will be a smoother pattern of income over the life of the project.
A. II and III.
B. I, II and III.
C. I and III.
Answer: C
Explanation: In the second year and years following, there are no associated expenses if the costs are expensed in the first year. If the costs are capitalized, there are depreciation expenses of \$2,500,000 that will improve cash flow by decreasing the taxes by \$750,000 = (\$2,500,000 x .3). If the costs are capitalized, the expense in each of years 1-10 will be the same--the depreciation expense of \$2,500,000.
