Technical RequirementsGeneral requirements:  
\*The web store application must be an ASP.NET MVC application written in Visual Studio.  
\*The application must connect to a Microsoft SQL database.  
\*The GetTop100Books() method is mission critical and must return data as quickly as possible. It should take advantage of fast, forward-only, read-only methods of reading data.

\*The children's book area of the web application must get data directly from a local database. It must use a connection string. It must also support access to the stored procedures on the database. Further, it is required to have strongly typed objects. Finally, it will require access to databases from multiple vendors and needs to support more than one-to-one mapping of database tables.
