NEW QUESTION: 1The ISO/IEC 27001:2005 is a standard for:**A.** Certification of public key infrastructures**B.** Implementation and certification of basic security measures**C.** Evaluation criteria for the validation of cryptographic algorithms**D.** Information Security Management System**Answer: D****Explanation:**The ISO 27000 Directory at: <http://www.27000.org/index.htm> has great coverage of the ISO 27000 series. The text below was extracted from their website. As mentioned by Belinda the ISO 27001 standard is the certification controls criteria while ISO 27002 is the actual standard. ISO 27002 used to be called ISO 17799 before being renamed. An Introduction To ISO 27001 (ISO27001)The ISO 27001 standard was published in October 2005, essentially replacing the old BS7799-2 standard. It is the specification for an ISMS, an Information Security Management System. BS7799 itself was a long standing standard, first published in the nineties as a code of practice. As this matured, a second part emerged to cover management systems. It is this against which certification is granted. Today in excess of a thousand certificates are in place, across the world. ISO 27001 enhanced the content of BS7799-2 and harmonized it with other standards. A scheme has been introduced by various certification bodies for conversion from BS7799 certification to ISO27001 certification. The objective of the standard itself is to "provide a model for establishing, implementing, operating, monitoring, reviewing, maintaining, and improving an Information Security Management System". Regarding its adoption, this should be a strategic decision. Further, "The design and implementation of an organization's ISMS is influenced by their needs and objectives, security requirements, the process employed and the size and structure of the organization". The standard defines its 'process approach' as "The application of a system of processes within an organization, together with the identification and interactions of these processes, and their management". It employs the PDCA, Plan-Do-Check-Act model to structure the processes, and reflects the principles set out in the OECG guidelines (see oecd.org).**THE CONTENTS OF ISO 27001**The content sections of the standard are: Management Responsibility Internal Audits ISMS Improvement Annex A - Control objectives and controls Annex B - OECD principles and this international standard Annex C - Correspondence between ISO 9001, ISO 14001 and this standard Introduction To ISO 27002 (ISO27002)The ISO 27002 standard is the rename of the ISO 17799 standard, and is a code of practice for information security. It basically outlines hundreds of potential controls and control mechanisms, which may be implemented, in theory, subject to the guidance provided within ISO 27001. The standard "established guidelines and general

principles for initiating, implementing, maintaining, and improving information security management within an organization". The actual controls listed in the standard are intended to address the specific requirements identified via a formal risk assessment. The standard is also intended to provide a guide for the development of "organizational security standards and effective security management practices and to help build confidence in inter-organizational activities". The basis of the standard was originally a document published by the UK government, which became a standard 'proper' in 1995, when it was re-published by BSI as BS7799. In 2000 it was again re-published, this time by ISO, as ISO 17799. A new version of this appeared in 2005, along with a new publication, ISO 27001. These two documents are intended to be used together, with one complimenting the other. ISO's future plans for this standard are focused largely around the development and publication of industry specific versions (for example: health sector, manufacturing, and so on). Note that this is a lengthy process, so the new standards will take some time to appear.

THE CONTENTS OF ISO 17799 / 27002

The content sections are: Structure Risk Assessment and Treatment Security Policy Organization of Information Security Asset Management Human Resources Security Physical Security Communications and Ops Management Access Control Information Systems Acquisition, Development, Maintenance Information Security Incident management Business Continuity Compliance

NEW QUESTION: 3 Your network is configured as shown in the exhibit. (Click the Exhibit button.) Server1 regularly accesses Server2. You discover that all of the connections from Server1 to Server2 are routed through Router1. You need to optimize the connection path from Server1 to Server2. Which route command should you run on Server1? **A.** Route add -p 10.10.10.0 MASK 255.255.255.0 172.23.16.2 METRIC 100 **B.** Route add -p 10.10.10.12 MASK 255.255.255.0 10.10.10.0 METRIC 50 **C.** Route add -p 10.10.10.12 MASK 255.255.255.0 10.10.10.1 METRIC 100 **D.** Route add -p 10.10.10.0 MASK 255.255.255.0 10.10.10.1 METRIC 50 **Answer: A**

Explanation: Explanation/Reference: Explanation: Destination - specifies either an IP address or host name for the network or host. subnetmask - specifies a subnet mask to be associated with this route entry. If subnetmask is not specified, 255.255.255.255 is used. gateway - specifies either an IP address or host name for the gateway or router to use when forwarding. costmetric - assigns an integer cost metric (ranging from 1 through 9,999) to be used in calculating the fastest, most reliable, and/or least expensive routes. If costmetric is not specified, 1 is used. interface - specifies the interface to be used for the route that uses the interface number. If an interface is not specified, the interface to be used for the route is determined from the gateway IP address.
