As is known to us, there are best sale and after-sale service of the CWNA-109 study materials all over the world in our company, Sometimes you can't decide whether to purchase VCE torrent, or which company is worth to select.

And our website is the most reliable one, We provide high quality and easy to understand CWNA-109 dumps with verified CWNP CWNA-109 for all the professionals who are looking to pass the CWNP CWNA-109 exam in the first attempt.

All of the CWNP practice questions are checked and verified [HPE2-N71 PDF VCE](#) by our own team of experts to ensure that every CWNP test contains accurate and easy to understand CWNP Answers.

If you are a student, you can take the time to simulate the real test environment on the computer online, We always improve and update the content of the CWNP CWNA-109 reliable dumps questions in the past years and add the newest content into our CWNA-109 learning materials constantly, which made our CWNA-109 study guide get high passing rate about 97 to 100 percent.

**NEW QUESTION: 1** Which two actions should you perform to allow users in the Toronto office to use an SMTP domain address of adatum.ca? (Choose Two)?  
**A.** On the external DNS server, create an MX record for the Toronto Domain.  
**B.** Create a group policy for the Toronto Organizational Unit (OU)  
**C.** Place a global catalog server in the Toronto organizational Unit (OU)  
**D.** Create a recipient policy that is filtered for the Toronto users.  
**E.** Reconfigure the Recipient Update service for the Toronto Organizational Unit (OU)  
**F.** ON the external Dns server, Create an SRV record for the exchange for the exchange 2000 server computer in the LOSANGELES office.  
**Answer: A, D**  
**Explanation:** We can get this by apply a recipient smtp policy to Toronto mailbox store users, also we will need a MX record for that domain, to permit to exchange to routing the mail follow to the adequate recipient

**NEW QUESTION: 2** Which two statements about ADDM are true?  
**A.** Real-Time ADDM uses AWR snapshots of the last 10 minutes.  
**B.** Real-Time ADDM uses ASH recent activity from SGA data.  
**C.** Regular ADDM uses AWR snapshots that are not yet purged.  
**D.** Real-Time ADDM analyzes performance in a completely different fashion than regular ADDM.  
**Answer: B, C**

**NEW QUESTION: 3** Your network contains an Active Directory domain named contoso.com. All client computers run Windows 10. You plan to deploy a Remote Desktop connection solution for the client computers. You have four available servers in the domain that can be configured as Remote Desktop servers. The servers are configured as shown in the following table. You need to ensure that all Remote Desktop connections can be protected by using Remote Credential Guard. Solution: You deploy the Remote Desktop connection solution by using Server4. Does this meet the goal?  
**A.** Yes  
**B.** No  
**Answer: B**  
**Explanation:** Explanation No, as Server4 is a Windows Server 2012R2 which does not meet the requirements of Remote Credential Guard.  
<https://docs.microsoft.com/en-us/windows/access-protection/remote-credential-guard>  
Remote Credential Guard requirements To use Windows Defender Remote Credential Guard, the Remote Desktop client and remote host must meet the following requirements:  
The Remote Desktop client device: Must be running at least Windows 10, version 1703 to be able to supply credentials. Must be running at least Windows 10, version 1607 or Windows Server 2016 to use the user's signed-in credentials. This requires the user's account be able to sign in to both the

client device and the remote host. Must be running the Remote Desktop Classic Windows application. The Remote Desktop Universal Windows Platform application doesn't support Windows Defender Remote Credential Guard. Must use Kerberos authentication to connect to the remote host. If the client cannot connect to a domain controller, then RDP attempts to fall back to NTLM. Windows Defender Remote Credential Guard does not allow NTLM fallback because this would expose credentials to risk. The Remote Desktop remote host: Must be running at least Windows 10, version 1607 or Windows Server 2016. Must allow Restricted Admin connections. Must allow the client's domain user to access Remote Desktop connections. Must allow delegation of non-exportable credentials.
