NEW QUESTION: 1To gain the benefit of tight functional integration, which statements do you think is not correct with respect to Single- system landscape scenarios to get run on the same SAP Solution Manager system. Please choose the correct answer. Response: **A**. In addition to above new support packages and SAP Notes are applied directly in production. **B**. The disadvantage is mainly in the increase of hardware and support costs. **C**. With this option, development, testing, and production operations all run in parallel in one system. **D**. Another disadvantage is All activities (customizing and development) are done in one system, the production system. **Answer: A**

NEW QUESTION: 2 A. Option DB. Option BC. Option AD. Option C **Answer: C**

NEW QUESTION: 3 Which action can be taken on a multiaccess segment with OSPF speakers to reduce the performance impact during widespread convergence events? **A**. Enable LSA throttling in the core to slow link state advertisement updates during times of network instability. **B**. Ensure that the elected DR or BDR router can support high-volume convergence events. **C**. Verify that fewer than 50 OSPF speakers are on the segment. **D**. Separate the network into multiple areas for each new multiaccess segment. **Answer: A** Explanation: "It is worth noting that three most important timers to tune network for sub-second convergence are the failure detection delay, initial LSA generation delay and initial SPF delay. All other timers, such as hold and maximum time serve the purpose of stabilizing network, and affect convergence in "worst-case" unstable network scenarios." More info on LSA throttling: https://www.cisco.com/c/en/us/td/docs/ios/12_0s/feature/guide/fsolsath.html "Benefits of OSPF LSA Throttling Prior to the OSPF LSA Throttling feature, LSA generation was rate-limited for 5 seconds. That meant that changes in an LSA could not be propagated in milliseconds, so the OSPF network could not achieve millisecond convergence. The OSPF LSA Throttling feature is enabled by default and allows faster OSPF convergence (in milliseconds). This feature can be customized. One command controls the generation (sending) of LSAs and another command controls the receiving interval. This feature also provides a dynamic mechanism to slow down the frequency of LSA updates in OSPF during times of network instability."

NEW QUESTION: 4 Which MST configuration statement is correct? **A**. After MST is configured on a Switch, PVST+ operations will also be enabled by default. **B**. MST configurations only need to be manually configured on the Root Bridge. **C**. MST configurations are entered using the VLAN Database mode on Cisco Catalyst switches. **D**. MST configurations can be propagated to other switches using VTP. **E**. MST configurations must be manually configured on each switch within the MST region. **Answer: D** Explanation: In addition to propagating VTP information, version 3 can propagate Multiple Spanning Tree (MST) protocol database information. A separate instance of the VTP protocol runs for each application that uses VTP.
