**Explanation:**Topic 8, Scenario 6, V1 "Independent Test Team"XYZ is a Swedish company and the company language is local and all system development documentation is done in the local language.As a test manager you are currently leading an independent test team of 4 people to system test the payroll functionality. The 4 members of staff of described below:-John is one of the senior testers. He has been working for the company the longest and has a good network of contacts. He is confident and tries to bring other team members together to promote team discussions. He is sometimes considered to be manipulative and is often seen to delegate personal work.-Sue is a senior tester. She always seems to be busy and often seems to have too much work to do. However, she gets her work done, regardless of what it takes. She is often inclined to worry unduly and sometimes considered to be argumentative and blunt. She is conscientious and searches out errors and omissions. She always delivers on time.-Steve is a tester. He is serious minded and often looks ahead. When he is given problems to solve he often looks at all options before deciding. He needs to be a little bit more diplomatic though in his approach to other people because his attitude often has a negative affect when trying to inspire others. He is good person discuss ideas with. Steve used to work as a business analyst on the payroll department.-Vicki is a test analyst. She is the newest member of the team and has been employed for her automation skills. Vicki is shown to be dedicated to automation, having spent the past 5 years developing the necessary skills in automation tools. Her view on testing seems too limited; she believes automation is the only way forward.Both John and Sue are highly experienced at finding defects based on their experience with the system and domain knowledge.

**NEW QUESTION: 3** You are developing an ASP.NET Core application. You plan to use YAML as the configuration language. You create a custom YAML configuration parser. You need to implement a mechanism to support reading and applying these YAML configurations. How should you complete the code? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Topic 1, Olympic Marathon Background You are developing an ASP.NET MVC application in Visual Studio 2012 that will be used by Olympic marathon runners to log data about training runs. Business Requirements The application stores date, distance, and duration information about a user's training runs. The user can view, insert, edit, and delete records. The application must be optimized for accessibility. All times must be displayed in the user's local time. Technical Requirements Data Access: Database access is handled by a public class named RunnerLog.DataAccess.RunnerLogDb All data retrieval must be done by HTTP GET and all data updates must be done by HTTP POST. Layout: All pages in the application use a master layout file named ViewsShared\_Layout.cshtml. Models: The application uses the Models\LogModel.cs model. Views: All views in the application use the Razor view engine. Four views located in Views\RunLog are named: \* \_CalculatePace.cshtml \* EditLog.cshtml \* GetLog.cshtml \* InsertLog.cshtml The application also contains a Views\Home\Index.cshtml view. Controllers: The application contains a Controllers\RunLogController.cs controller. Images: A stopwatch.png image is located in the Images folder. Videos: A map of a runner's path is available when a user views a run log. The map is implemented as an Adobe Flash application and video. The browser should display the video natively if possible, using H264, Ogg, or WebM formats, in that order. If the video cannot be displayed, then the Flash application should be used. Security: You have the following security requirements: \* The application is configured to use forms authentication. \* Users must be logged on to insert runner data. \* Users must be members of the Admin role to edit or delete runner data. \* There are no security requirements for viewing runner data. \* You need to protect the application against cross-site request forgery. \* Passwords are hashed by using the SHA1 algorithm. RunnerLog.Providers.RunLogRoleProvider.cs contains a custom role provider. Relevant portions of the application files follow. (Line numbers are included for reference only.) Application Structure
