NEW QUESTION: 1Your network contains an Active Directory forest. The forest contains two Active Directory domains named contoso.com and child.contoso.com. The forest functional level is Windows Server 2003. The functional level of both domains is Windows Server 2008. The forest contains three domain controllers. The domain controllers are configured as shown in the following table. DC1 and DC2 have the DNS Server server role installed and are authoritative for both contoso.com and child.contoso.com. The child.contoso.com domain contains a server named server1.child.contoso.com that runs Windows Server 2012. You plan to deploy server1.child.contoso.com as a read-only domain controller (RODC). You run the adprep.exe /rodcrep command on DC3 and receive the following error message: You need to identify what prevents you from successfully running Adprep /rodcrep on DC3. What should you identify? **A.** DC3 cannot connect to the domain naming master on DC1. **B.** DC3 cannot connect to the infrastructure master on DC2. **C.** The domain functional level of child.contoso.com is set to the wrong level. **D.** The forest functional level is set to the wrong level. **Answer: B**

NEW QUESTION: 2Which technology provides an innovative new method for collectively utilizing the capabilities of interconnecting switches? **A.** PoE **B.** MACsec **C.** StackWise **D.** StackPower **Answer: B** Explanation: http://www.cisco.com/c/en/us/products/collateral/switches/catalyst-2960series-switches/white_paper_c11-577729.html

NEW QUESTION: 3Which fields are available for programmatic access on a response document when it is initially created? **A.** only fields from the parent document designated with an inheritance property **B.** fields from the parent database properties **C.** fields from the parent view **D.** fields from the parent document **Answer: D** Explanation: Explanation/Reference: Explanation:

NEW QUESTION: 4Your company will undergo a security audit in one week. Your manager has asked you to download and review recent logs from an Object Storage bucket. The current log archive file is approximately 19 GB in size. Which command would you run to download the archive file as quickly as possible?

A) `oci os object get -ns my-namespace -bn my-bucket --name my-large-object --multipart-download-threshold 2000 --part-size 120`
B) `oci os object get -ns my-namespace -bn my-bucket --name my-large-object --multipart-download-threshold 2000 --part-size 128`
C) `oci os object put -ns my-namespace -bn my-bucket --name my-large-object --multipart-download-threshold 20000 --part-size 128`
D) `oci os object get -ns my-namespace -bn my-bucket --name my-large-object --multipart-download-threshold 20000 --part-size 128`

Answer: B

Explanation: Large files can be downloaded from Object Storage in multiple parts to speed up the download. You can configure the following options for the `oci os object get` command:

- `--multipart-download-threshold` lets you specify the size, in MiB, at which an object should be downloaded in multiple parts. This size must be at least 128 MiB.
- `--part-size`, in MiB, to use for a download part. This gives you the flexibility to use more (smaller size) or fewer (larger size) parts as appropriate for your requirements. For example, compute power and network bandwidth. The default minimum part size is 120 MiB.
- `--parallel-download-count` lets you specify how many parts are downloaded at the same time. A higher value may improve times but consume more system resources and network bandwidth. The default value is 10.

The following example shows the command to download any object with a size greater than 500 MiB. The object is downloaded in 128 MiB parts.

```
oci os object get -ns my-namespace -bn my-bucket --name my-large-object --multipart-download-threshold 500 --part-size 128
```

Objects larger than this size (in MiB) will be downloaded in multiple parts. The minimum allowable threshold is 128 MiB.
