**NEW QUESTION: 1** Ein Techniker richtet einen PC zum Hosten eines Servers in einem SOHO ein. Der Techniker verwendet einen zweiten Router für diesen PC, stellt jedoch fest, dass der Webserver nicht über das Internet erreichbar ist. Der Techniker überprüft, ob der Webserver selbst ordnungsgemäß konfiguriert ist. Welche der folgenden Optionen kann auf dem Router aktiviert werden, damit der gesamte Datenverkehr den Webserver erreicht?**A. DMZ****B. IPv6****C. UPnP****D. WPA2****Answer: A**

**NEW QUESTION: 2** A company wishes to enable Single Sign On (SSO) so its employees can login to the management console using their corporate directory identity. Which steps below are required as part of the process? Select 2 answers from the options given below. Please select:**A. Create an IAM role that establishes a trust relationship between IAM and the corporate directory identity provider (IdP)** **B. Create a Direct Connect connection so that corporate users can access the AWS account** Option B is incorrect because IAM policies are not directly mapped to group memberships in the corporate directory. It is IAM roles which are mapped.**C. Create a Direct Connect connection between on-premise network and AWS. Use an AD connector for connecting AWS with on-premise active directory.****D. Create a Lambda function to assign IAM roles to the temporary security tokens provided to the users.****E. Create IAM users that can be mapped to the employees' corporate identities****F. Create IAM policies that can be mapped to group memberships in the corporate directory.****Answer: A, B** Explanation: Option C is incorrect because Lambda functions is an incorrect option to assign roles. Option D is incorrect because IAM users are not directly mapped to employees' corporate identities. For more information on Direct Connect, please refer to below URL: ' <https://aws.amazon.com/directconnect/> From the AWS Documentation, for federated access, you also need to ensure the right policy permissions are in place Configure permissions in AWS for your federated users The next step is to create an IAM role that establishes a trust relationship between IAM and your organization's IdP that identifies your IdP as a principal (trusted entity) for purposes of federation. The role also defines what users authenticated your organization's IdP are allowed to do in AWS. You can use the IAM console to create this role. When you create the trust policy that indicates who can assume the role, you specify the SAML provider that you created earlier in IAM along with one or more SAML attributes that a user must match to be allowed to assume the role. For example, you can specify that only users whose SAML eduPersonOrgDN value is ExampleOrg are allowed to sign in. The role wizard automatically adds a condition to test the saml:aud attribute to make sure that the role is assumed only for sign-in to the AWS Management Console. The trust policy for the role might look like this: For more information on SAML federation, please refer to below URL: [https://docs.aws.amazon.com/IAM/latest/UserGuide/id\\_roles\\_providers\\_enable](https://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles_providers_enable) Note: What directories can I use with AWS SSO? You can connect AWS SSO to Microsoft Active Directory, running either on-premises or in the AWS Cloud. AWS SSO supports AWS Directory Service for Microsoft Active Directory, also known as AWS Managed Microsoft AD, and AD Connector. AWS SSO does not support Simple AD. See AWS Directory Service Getting Started to learn more. To connect to your on-premises directory with AD Connector, you need the following: **VPC** Set up a VPC with the following: \* At least two subnets. Each of the subnets must be in a different Availability Zone. \* The VPC must be connected to your on-premises network

through a virtual private network (VPN) connection or AWS Direct Connect.\* The VPC must have default hardware tenancy.\* <https://aws.amazon.com/single-sign-on/>\* <https://aws.amazon.com/single-sign-on/faqs/>\* <https://aws.amazon.com/blog/using-corporate-credentials/>\* <https://docs.aws.amazon.com/directoryservice/latest/admin->  
The correct answers are: Create a Direct Connect connection between on-premise network and AWS. Use an AD connector connecting AWS with on-premise active directory.. Create an IAM role that establishes a trust relationship between IAM and corporate directory identity provider (IdP) Submit your Feedback/Queries to our Experts

**NEW QUESTION: 3**You are designing a cloudformation stack which involves the creation of a web server and a database server.You need to ensure that the web server in the stack gets created after the database server is created. How can you achieve this?**A.** Use the DependsOn attribute to ensure that the database server is created before the web server.**B.** Ensure that the web server is defined as a child of the database server in the cloudformation template.**C.** Ensure that the database server is defined as a child of the web server in the cloudformation template.**D.** Ensure that the database server is defined first and before the web server in the cloudformation template.The stack creation normally goes in order to create the resources.  
**Answer: A**Explanation:ExplanationThe AWS Documentation mentionsWith the DependsOn attribute you can specify that the creation of a specific resource follows another. When you add a DependsOn attribute to a resource, that resource is created only after the creation of the resource specified in the DependsOn attribute.For more information on the DependsOn attribute, please visit the below url
