So the pending exam causes a panic among the exam candidates, Also, the real test environment of the 1z0-1047-24 study materials can help you control time.

NEW QUESTION: 1The plan must be checked against available capacity when needed to make the components is called the process of**A. Material Requirements planning (MRP)****B. Production Activity control (PAC)****C. Capacity Requirement planning****D. A & C****Answer: C**

NEW QUESTION: 2**A.** You need to identify the maximum number of Mailbox servers that can fail simultaneously without affecting the mailbox access of the users.How many servers should you identify?**B. 0C. 1D. 2E. 3****Answer: B****Explanation:**Explanation/Reference:Explanation:Example: Quorum requires a majority of voters to be able to communicate with each other. Consider a DAG that has four members. Because this DAG has an even number of members, an external witness server is used to provide one of the cluster members with a fifth, tie-breaking vote. To maintain a majority of voters (and therefore quorum), at least three voters must be able to communicate with each other. At any time, a maximum of two voters can be offline without disrupting service and data access. If three or more voters are offline, the DAG loses quorum, and service and data access will be disrupted until you resolve the problem.Reference: Database availability groups <https://technet.microsoft.com/en-us/library/dd979799%28v=exch.150%29.aspx>

NEW QUESTION: 3Rebecca commonly sees an error on her Windows system that states that a Data Execution Prevention (DEP) error has taken place. Which of the following is most likely taking place?**A. Malware is executing in either ROM or a cache memory area.****B. Malicious code is attempting to execute instruction in a non-executable memory region.****C. A page fault is occurring, which forces the operating system to write data from the hard drive.****D. A race**

condition is being exploited, and the operating system is containing the malicious process.

Answer: B

NEW QUESTION: 4 Which of the following would best describe the difference between white-box testing and black-box testing?
A. Black-box testing uses the bottom-up approach.
B. White-box testing examines the program internal logical structure.
C. Black-box testing involves the business units.
D. White-box testing is performed by an independent programmer team.

Answer: B
Explanation: Explanation/Reference: Explanation: White box software testing gives the tester access to program source code, data structures, variables, etc. White box testing gives the tester access to the internal logical structure of the program, while black box testing gives the tester no internal details: The software is treated as a black box that receives inputs. Incorrect Answers: A: White-box testing can be performed by any programmer who has access the source code. B: Black-box testing just hides the internal details of the program. Black-box testing does not use either a bottom-up, or top down approach. D: Black-box testing is blind to business units, as it has not access to any internal details of the program.
