NEW QUESTION: 4**HOTSPOT****Answer:** Explanation:Explanation:Metric: Specifies an integer cost metric (ranging from 1 to 9999) for the route, which is used when choosing among multiple routes in the routing table that most closely match the destination address of a packet being forwarded. The route with the lowest metric is chosen. The metric can reflect the number of hops, the speed of the path, path reliability, path throughput, or administrative properties. A metric is a value that is assigned to an IP route for a particular network interface that identifies the cost that is associated with using that route. The metric that is assigned to specific default gateways can be configured independently for each gateway. This setup enables a further level of control over the metric that is used for the local routes.
