NEW QUESTION: 1You are developing a medical recordkeeping app for a company. The app will be used by physicians in remote areas of the world.All data is highly sensitive and must be stored only in the company's internal data center. The app is not allowed to connect directly to the company's web service or internal network.You need to select a data access strategy that meets the requirements.Which remote data access strategy should you use?**A.** Connect to a SQL Azure database and use SQL Data Sync.**B.** Connect to the company's web service framework by using Windows Azure Connect.**C.** Connect to Windows Azure Mobile Services and store the data in a SQL Azure database.**D.** Use the Windows.Storage.ApplicationData.Current.LocalSettings data store.**Answer: B**

NEW QUESTION: 2You write MapReduce job to process 100 files in HDFS. Your MapReduce algorithm uses TextInputFormat: the mapper applies a regular expression over input values and emits key-values pairs with the key consisting of the matching text, and the value containing the filename and byte offset. Determine the difference between setting the number of reduces to one and settings the number of reducers to zero.**A.** With zero reducers, all instances of matching patterns are gathered together in one file on HDFS. With one reducer, instances of matching patterns are stored in multiple files on HDFS.**B.** With zero reducers, instances of matching patterns are stored in multiple files on HDFS. With one reducer, all instances of matching patterns are gathered together in one file on HDFS.**C.** With zero reducers, no reducer runs and the job throws an exception. With one reducer, instances of matching patterns are stored in a single file on HDFS.**D.** There is no difference in output between the two settings.**Answer: B**Explanation:* It is legal to set the number of reduce-tasks to zero if no reduction is desired.In this case the outputs of the map-tasks go directly to the FileSystem, into the output path set by setOutputPath(Path). The framework does not sort the map-outputs before writing them out to the FileSystem.* Often, you may want to process input data using a map function only. To do this, simply set mapreduce.job.reduces to zero. The MapReduce framework will not create any reducer tasks. Rather, the outputs of the mapper tasks will be the final output of the job.Note:ReduceIn this phase the reduce(WritableComparable, Iterator, OutputCollector, Reporter) methodis called for each <key, (list of values)> pair in the grouped inputs.The output of the reduce task is typically written to the FileSystem via OutputCollector.collect(WritableComparable, Writable).Applications can use the Reporter to report progress, set application-level status messagesand update Counters, or just indicate that they are alive.The output of the Reducer is not sorted.

NEW QUESTION: 3Refer to the exhibit.Which IP address should be configured as the tunnel source on the HQ router for maximum resiliency?**A.** 192.168.10.1**B.** 10.20.1.1**C.** 172.18.10.2**D.** 10.30.1.1**Answer: A**
