**NEW QUESTION: 1**Your network contains an Active Directory forest. The forest contains two domains named contoso.com and wingtiptoy.com. The network contains a public DNS server named Server1 and an e-mail server named Server2. You notice that Internet hosts can send e-mail messages to users that have the @contoso.com SMTP suffix, but cannot send e-mail messages to users that have the @wingtiptoy.com SMTP suffix. You need to ensure that every user can receive e-mail messages from the Internet. Which type of resource record should you add to the wingtiptoy.com zone?**A.** Service Locator (SRV)**B.** Mail Exchanger (MX)**C.** Host (A)**D.** Mail Group (MG)**Answer: B****Explanation:**MX Resource RecordsThe mail exchange (MX) resource record specifies a mail exchange server for a DNS domain name. A mail exchange server is a host that will either process or forward mail for the DNS domain name. Processing the mail means either delivering it to the addressee or passing it to a different type of mail transport. Forwarding the mail means sending it to its final destination server, sending it using Simple Mail Transfer Protocol (SMTP) to another mail exchange server that is closer to the final destination, or queuing it for a specified amount of time.

**NEW QUESTION: 2**Which two options are valid for the number of bytes in a BGP AS number? (Choose two.)**A.** 4 bytes**B.** 2 bytes**C.** 16 bytes**D.** 6 bytes**E.** 8 bytes**Answer: A, B****Explanation:** During the early time of BGP development and standardization, it was assumed that availability of a 16 bit binary number to identify the Autonomous System (AS) within BGP would have been more than sufficient. The 16 bit AS number, also known as the 2-byte AS number, provides a pool of 65536 unique Autonomous System numbers. The IANA manages the available BGP Autonomous System Numbers (ASN) pool, with the assignments being carried out by the Regional Registries. The current consumption rate of the publicly available AS numbers suggests that the entire public 2-byte ASN pool will be fully depleted. A solution to this depletion is the expansion of the existing 2-byte AS number to a 4-byte AS number, which provides a theoretical 4,294,967,296 unique AS numbers. ARIN has made the following policy changes in conjunction with the adoption of the solution. The Cisco IOS BGP "4-byte ASN" feature allows BGP to carry a Autonomous System Number (ASN) encoded as a 4-byte entity.

The addition of this feature allows an operator to use an expanded 4-byte AS number granted by IANA.
