NEW QUESTION: 1One-to-one ratio mapping for access switches close to servers.**A. ToRB. EoR**
Answer: A

NEW QUESTION: 2When managing permissions for the API gateway, what can be used to ensure that the right level of permissions are given to developers, IT admins and users? These permissions should be easily managed. Please select:**A. Use IAM Policies to create different policies for the different types of users. B. Use the secure token service to manage the permissions for the different users C. Use the AWS Config tool to manage the permissions for the different users D. Use IAM Access Keys to create sets of keys for the different types of users.**
Answer: A Explanation: Explanation The AWS Documentation mentions the following You control access to Amazon API Gateway with IAM permissions by controlling access to the following two API Gateway component processes: * To create, deploy, and manage an API in API Gateway, you must grant the API developer permissions to perform the required actions supported by the API management component of API Gateway. * To call a deployed API or to refresh the API caching, you must grant the API caller permissions to perform required IAM actions supported by the API execution component of API Gateway. Option A, C and D are invalid because these cannot be used to control access to AWS services. This needs to be done via policies. For more information on permissions with the API gateway, please visit the following URL: <https://docs.aws.amazon.com/apigateway/latest/developerguide/permissions.html> The correct answer is: Use IAM Policies to create different policies for the different types of users.
