NEW QUESTION: 1Your network contains an Active Directory domain named adatum.com. The domain contains the servers configured as shown in the following table: You have a server named Server6 in the perimeter network. Each server has the local users shown in the following table. The domain contains the users shown in the following table. You install a Web Application Proxy on Server6. You need to configure the Web Application proxy on Server6. The solution must use the principle of least privilege. Which account should you specify in the Web Application Proxy Configuration Wizard? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation The user account used to configure the web application proxy must have local Administrator permission on the WAP server(s), and have access to an account that have local Administrator permissions on the AD FS servers. NEW QUESTION: 2What type of cards fit into the front of Cisco ASR 5000 chassis? **A.** Line cards and application cards **B.** Application cards and management cards **C.** Fan cards and line cards **D.** Application cards and linear cards **Answer: B**

NEW QUESTION: 3George has launched three EC2 instances inside the US-East-1a zone with his AWS account. Ray has launched two EC2 instances in the US-East-1a zone with his AWS account. Which of the below mentioned statements will help George and Ray understand the availability zone (AZ) concept better? **A.** All the instances of George and Ray can communicate over a private IP without any cost **B.** The US-East-1a region of George and Ray can be different availability zones **C.** The instances of George and Ray will be running in the same data center **D.** All the instances of George and Ray can communicate over a private IP with a minimal cost **Answer: B** Explanation: Each AWS region has multiple, isolated locations known as Availability Zones. To ensure that the AWS resources are distributed across the Availability Zones for a region, AWS independently maps the Availability Zones to identifiers for each account. In this case the Availability Zone US-East-1a where George's EC2 instances are running might not be the same location as the US-East-1a zone of Ray's EC2 instances. There is no way for the user to coordinate the Availability Zones between accounts.

NEW QUESTION: 4 Refer to the exhibit. If host A sends an IP packet to host B, what will the source physical address be in the frame when it reaches host B?
A. C3:C3:C3:C3:C3:C3
B. 10.168.10.99
C. A1:A1:A1:A1:A1:A1
D. 10.168.11.88
E. B2:B2:B2:B2:B2:B2
F. D4:D4:D4:D4:D4:D4

Answer: A
Explanation: When packets transfer from one host to another across a routed segment, the source IP address always remains the same source IP address, and the source physical (MAC) address will be the existing router's interface address. Similarly, the destination IP address always remains the same and the destination physical (MAC) address is the destination router's interface address.
