NEW QUESTION: 3 Which two statements about IS-IS are true? (Choose two.) **A.** The default hello interval is 10 seconds and the default hold timer is 30 seconds. **B.** Both routers need to have the name hello-interval and hold-timer in order to form IS-IS neighbors. **C.** The hello interval can be changed on a per-interface basis with the command `interface hello-multiplier`. **D.** Both IS-IS routers need to have the name capability in the hello packet in order to form neighbors. **Answer: A, C** Explanation: `interface hello-interval` To specify the length of time between hello packets that the Cisco IOS software sends, use the `interface hello-interval` command in interface configuration mode. By default, a value three times the hello interval is advertised as the hold time in the hello packet sent. (Change the multiplier of 3 by specifying the `interface hello-multiplier` command.) With smaller hello intervals, topological changes are detected faster, but there is more routing traffic. The default is 10 seconds.
