**B.** It is not used while the index is being rebuilt.  
**C.** The index cannot be rebuilt, and has to be re-created.  
**D.** The index is automatically rebuilt when used the next time.  
**Answer: A, B**  
**Explanation:** Explanation/Reference: Explanation:

**NEW QUESTION: 2** **A.** Secondary **B.** Stub **C.** Reverse lookup **D.** Primary  
**Answer: B**  
**Explanation:** When a zone that this DNS server hosts is a stub zone, this DNS server is a source only for information about the authoritative name servers for this zone. The zone at this server must be obtained from another DNS server that hosts the zone. This DNS server must have network access to the remote DNS server to copy the authoritative name server information about the zone. A stub zone is a copy of a zone that contains only necessary resource records (Start of Authority (SOA), Name Server (NS), and Address/Host (A) record) in the master zone and acts as a pointer to the authoritative name server. The stub zone allows the server to forward queries to the name server that is authoritative for the master zone without going up to the root name servers and working its way down to the server. While a stub zone can improve performance, it does not provide redundancy or load sharing. You can use stub zones to: Keep delegated zone information current. By updating a stub zone for one of its child zones regularly, the DNS server that hosts both the parent zone and the stub zone will maintain a current list of authoritative DNS servers for the child zone. Improve name resolution. Stub zones enable a DNS server to perform recursion using the stub zone's list of name servers, without having to query the Internet or an internal root server for the DNS namespace. Simplify DNS administration. By using stub zones throughout your DNS infrastructure, you can distribute a list of the authoritative DNS servers for a zone without using secondary zones. However, stub zones do not serve the same purpose as secondary zones, and they are not an alternative for enhancing redundancy and load sharing. There are two lists of DNS servers involved in the loading and maintenance of a stub zone: The list of master servers from which the DNS server loads and updates a stub zone. A master server may be a primary or secondary DNS server for the zone. In both cases, it will have a complete list of the DNS servers for the zone. The list of the authoritative DNS servers for a zone. This list is contained in the stub zone using name server

(NS) resource records. When a DNS server loads a stub zone, such as widgets.tailspintoys.com, it queries the master servers, which can be in different locations, for the necessary resource records of the authoritative servers for the zone widgets.tailspintoys.com. The list of master servers may contain a single server or multiple servers, and it can be changed anytime.

**NEW QUESTION: 3** Power BI レポートがあります。

次の各ステートメントについて、ステートメントが true の場合は [はい] を選択します。それ以外の場合は、[いいえ] を選択します。注：それぞれの正しい選択は 1 ポイントの価値があります。

**Answer:** Explanation: Explanation: Box 1: Yes If you'd like to see the data that Power BI uses to create a visualization, you can display that data in Power BI. You can also export that data to Excel as an .xlsx or .csv file. The option to export the data requires a Pro or Premium license and edit permissions to the dataset and report. Note: Export data from a Power BI dashboard Select the ellipsis in the upper-right corner of the visualization. Choose the Export data icon. Power BI exports the data to a .csv file. If you've filtered the visualization, then the app will filter the downloaded data. Your browser will prompt you to save the file. Once saved, open the .csv file in Excel. Box 2: No Underlying data: Select this option if you want to see the data in the visual and additional data from the model (see chart below for details). If your visualization has an aggregate, selecting Underlying data removes the aggregate. When you select Export, Power BI exports the data to an .xlsx file and your browser prompts you to save the file. Once saved, open the file in Excel. Box 3: Yes A KPI dataset needs to contain goal values for a KPI. If your dataset doesn't contain goal values, you can create them by adding an Excel sheet with goals to your data model or PBIX file. Note: A Key Performance Indicator (KPI) is a visual cue that communicates the amount of progress made toward a measurable goal.
