NEW QUESTION: 1 Hinweis: Diese Frage ist Teil einer Reihe von Fragen, die dasselbe Szenario darstellen. Jede Frage in der Reihe enthält eine eindeutige Lösung. Stellen Sie fest, ob die Lösung die angegebenen Ziele erfüllt. Ihr Netzwerk enthält eine Active Directory-Domäne mit dem Namen contoso.com. Die Domäne enthält einen DNS-Server mit dem Namen Server1. Auf allen Clientcomputern wird Windows 10 ausgeführt. Auf Server1 haben Sie die folgende Zonenkonfiguration. Sie müssen sicherstellen, dass alle Clientcomputer in der Domäne eine DNSSEC-Überprüfung für den Namespace fabrikam.com durchführen. Lösung: Von einem Gruppenrichtlinienobjekt (Group Policy Object, GPO) in der Domäne aus ändern Sie die Network List Manager-Richtlinien. Erfüllt dies das Ziel? **A. Nein** **B. Ja** **Answer: A** Explanation: Network List Manager Policies are security settings that you can use to configure different aspects of how networks are listed and displayed on one computer or on many computers. Network List Manager Policies are not related to DNSSEC. NEW QUESTION: 2 A risk practitioner is organizing risk awareness training for senior management. Which of the following is the MOST important topic to cover in the training session? **A. The organization's risk appetite and tolerance** **B. Senior management allocation of risk management resources** **C. Senior management roles and responsibilities** **D. The organization's strategic risk management projects** **Answer: C**

NEW QUESTION: 3 A security team wants to limit access to specific services or actions in all of the team's AWS accounts. All accounts belong to a large organization in AWS Organizations. The solution must be scalable and there must be a single point where permissions can be

maintained. What should a solutions architect do to accomplish this? **A.** Create cross-account roles in each account to deny access to the services or actions. **B.** Create an ACL to provide access to the services or actions. **C.** Create a service control policy in the root organizational unit to deny access to the services or actions. **D.** Create a security group to allow accounts and attach it to user groups. **Answer: C** Explanation: Service control policies (SCPs) offer central control over the maximum available permissions for all accounts in your organization, allowing you to ensure your accounts stay within your organization's access control guidelines. SCPs alone are not sufficient for allowing access in the accounts in your organization. Attaching an SCP to an AWS Organizations entity (root, OU, or account) defines a guardrail for what actions the principals can perform. You still need to attach identity-based or resource-based policies to principals or resources in your organization's accounts to actually grant permissions to them. CORRECT: "Create a service control policy in the root organizational unit to deny access to the services or actions" is the correct answer. INCORRECT: "Create an ACL to provide access to the services or actions" is incorrect as access control lists are not used for permissions associated with IAM. Permissions policies are used with IAM. INCORRECT: "Create a security group to allow accounts and attach it to user groups" is incorrect as security groups are instance level firewalls. They do not limit service actions. INCORRECT: "Create cross-account roles in each account to deny access to the services or actions" is incorrect as this is a complex solution and does not provide centralized control.
