Also you can share with your friends and compete with them.

NEW QUESTION: 1An HP Provision switch is controlled by a team of HP VAN SDN Controllers. In which settings can the network administrator specify which controller will become the master controller for the switch?**A.** switch OpenFlow controller settings**B.** controller team region settings**C.** switch OpenFlow instance settings**D.** controller team datapath settings**Answer: B**

NEW QUESTION: 2You are developing a method named CreateCounters that will create performance counters for an application. The method includes the following code. (Line numbers are included for reference only.)You need to ensure that Counter2 is available for use in Windows Performance Monitor (PerfMon).Which code segment should you insert at line 16?**A.** CounterType = PerformanceCounterType.RawBase**B.** CounterType = PerformanceCounterType.SampleBase**C.** CounterType = PerformanceCounterType.CounterMultiBase**D.** CounterType = PerformanceCounterType.AverageBase**Answer: C****Explanation:**Explanation/Reference: Explanation:PerformanceCounterType.AverageTimer32 - An average counter that measures the time it takes, on average, to complete a process or operation. Counters of this type display a ratio of the total elapsed time of the sample interval to the number of processes or operations completed during that time. This counter type measures time in ticks of the system clock. Formula: $((N_1 - N_0) / F) / (B_1 - B_0)$, where N_1 and N_0 are performance counter readings, B_1 and B_0 are their corresponding AverageBase values, and F is the number of ticks per second. The value of F is factored into the equation so that the result can be displayed in seconds. Thus, the numerator represents the numbers of ticks counted during the last sample interval, F represents the frequency of the ticks, and the denominator represents the number of operations completed during the last sample interval. Counters of this type include

PhysicalDisk Avg. Disk sec/Transfer.PerformanceCounterType.AverageBase - A base counter that is used in the calculation of time or count averages, such as AverageTimer32 and AverageCount64. Stores the denominator for calculating a counter to present "time per operation" or "count per operation"..
