**NEW QUESTION: 2**What attack involves the perpetrator sending spoofed packet(s) which contains the same destination and source IP address as the remote host, the same port for the source and destination, having the SYN flag, and targeting any open ports that are open on the remote host?**A.** Smurf attack**B.** Teardrop attack**C.** Boink attack**D.** Land attack**Answer: D**

Explanation:Explanation/Reference:Explanation:A land (Local Area Network Denial) attack involves sending a spoofed TCP SYN packet (connection initiation) with the target host's IP address to an open port as both source and destination. This causes the machine to reply to itself continuously.Incorrect Answers:A: The Boink attack manipulates a field in TCP/IP packets, called a fragment offset. This field tells a computer how to reconstruct a packet that was broken up (fragmented) because it was too big to transmit in a whole piece. By manipulating this number, the Boink attack causes the target machine to reassemble a packet that is much too big to be reassembled. This causes the target computer to crash.C: A teardrop attack is a denial-of-service (DoS) attack that involves sending fragmented packets to a target machine.D:

The Smurf Attack is a distributed denial-of-service attack in which large numbers of Internet Control Message Protocol (ICMP) packets with the intended victim's spoofed source IP are broadcast to a computer network using an IP Broadcast address.
