### NEW QUESTION: 1

侵入テスト担当のJoeは、モバイルWebアプリケーションとRESTfulアプリケーションサーバー間のプロトコルのセキュリティの堅牢性をテストすることを任務としています。モバイルWebアプリケーションとRESTfulアプリケーションサーバー間のセキュリティを評価するために必要なセキュリティツールはどれですか。(2を選択) **A. 偵察ツール** **B. 脱獄モバイルデバイス** **C.**

パスワードクラッカー **D. HTTPインターセプター** **E. ネットワーク列挙子** **F. 脆弱性スキャナー**

**Answer: D, F** Explanation: Communications between a mobile web application and a RESTful application server will use the HTTP protocol. To capture the HTTP communications for analysis, you should use an HTTP Interceptor. To assess the security of the application server itself, you should use a vulnerability scanner. A vulnerability scan is the automated process of proactively identifying security vulnerabilities of computing systems in a network in order to determine if and where a system can be exploited and/or threatened. While public servers are important for communication and data transfer over the Internet, they open the door to potential security breaches by threat agents, such as malicious hackers. Vulnerability scanning employs software that seeks out security flaws based on a database of known flaws, testing systems for the occurrence of these flaws and generating a report of the findings that an individual or an enterprise can use to tighten the network's security. Vulnerability scanning typically refers to the scanning of systems that are connected to the Internet but can also refer to system audits on internal networks that are not connected to the Internet in order to assess the threat of rogue software or malicious employees in an enterprise. Incorrect Answers: A: A jailbroken mobile device is a mobile device with an operating system that has any built-in security restrictions removed. This enables you to install software and perform actions that the manufacturer did not intend. However, a jailbroken mobile device is not a suitable security tool to assess the security between the mobile web application and the RESTful application server. B: Reconnaissance in terms of IT security is the process of learning as much as possible about a target business usually over a long period of time with a view to discovering security flaws. It is not used by security administrators for security assessment of client-server applications. C: Network enumeration is a computing activity in which usernames and info on groups, shares, and services of networked computers are retrieved. It is not used to assess the security between the mobile web application and the RESTful application server. F: A password cracker is used to guess passwords. It is not a suitable security tool to assess the security between the

mobile web application and the RESTful application server. References:

**NEW QUESTION: 2** You work as a Network Administrator for Tech Perfect Inc. The company has a Windows Active Directory-based single domain single forest network. The functional level of the forest is Windows Server 2003. The company's headquarters is located at Los Angeles. A branch office of the company is located at Denver. You are about to send a message to Rick who is a Network Administrator at Denver. You want to ensure that the message cannot be read by anyone but the recipient. Which of the following keys will you use to encrypt the message?  
**A.** The recipient's public key  
**B.** The recipient's private key  
**C.** Your private key  
**D.** Your public key  
**Answer: A**

**NEW QUESTION: 3** Your company has an Azure Container Registry named Registry1. You have an Azure virtual machine named Server1 that runs Windows Server 2019. From Server1, you create a container image named image1. You need to add image1 to Registry1. Which command should you run on Server1? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.  
**Answer:** Explanation: Explanation: An Azure container registry stores and manages private Docker container images, similar to the way Docker Hub stores public Docker images. You can use the Docker command-line interface (Docker CLI) for login, push, pull, and other operations on your container registry.
