AutoMLConfig定義をどのように完了する必要がありますか？回答するには、回答領域で適切なオプションを選択します。注：正しい選択はそれぞれ1ポイントの価値があります。**Answer:**

Explanation:Explanation:Box 1: forecastingTask: The type of task to run. Values can be 'classification', 'regression', or 'forecasting' depending on the type of automated ML problem to solve.Box 2: temperatureThe training data to be used within the experiment. It should contain both training features and a label column (optionally a sample weights column).Box 3: observation_time_column_name: The name of the time column. This parameter is required when forecasting to specify the datetime column in the input data used for building the time series and inferring its frequency. This setting is being deprecated. Please use forecasting_parameters instead.Box 4: 7"predicts temperature over the next seven days" max_horizon: The desired maximum forecast horizon in units of time-series frequency. The default value is 1.Units are based on the time interval of your training data, e.g., monthly, weekly that the forecaster should predict out. When task type is forecasting, this parameter is required.Box 5: 50"For the initial round of training, you want to train a maximum of 50 different models." Iterations: The total number of different algorithm and parameter combinations to test during an automated ML experiment.Reference:
