So choosing our CompTIA DA0-001 study materials you will take more than you have imagined.

NEW QUESTION: 1Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.You have a database that contains the following tables: BlogCategory, BlogEntry, ProductReview, Product, and SalesPerson. The tables were created using the following Transact SQL statements:You must modify the ProductReview Table to meet the following requirements:* The table must reference the ProductID column in the Product table* Existing records in the ProductReview table must not be validated with the Product table.* Deleting records in the Product table must not be allowed if records are referenced by the ProductReview table.* Changes to records in the Product table must propagate to the ProductReview table.You also have the following database tables: Order, ProductTypes, and SalesHistory, The transact-SQL statements for these tables are not available.You must modify the Orders table to meet the following requirements:* Create new rows in the table without granting INSERT permissions to the table.* Notify the sales person who places an order whether or not the order was completed.You must add the following constraints to the SalesHistory table:* a constraint on the SaleID column that allows the field to be used as a record identifier* a constant that uses the ProductID column to reference the Product column of the ProductTypes table* a constraint on the CategoryID column that allows one row with a null value in the column* a constraint that limits the SalePrice column to values

greater than four Finance department users must be able to retrieve data from the SalesHistory table for sales persons where the value of the SalesYTD column is above a certain threshold. You plan to create a memory-optimized table named SalesOrder. The table must meet the following requirements: * The table must hold 10 million unique sales orders. * The table must use checkpoints to minimize I/O operations and must not use transaction logging. * Data loss is acceptable. Performance for queries against the SalesOrder table that use Where clauses with exact equality operations must be optimized. You need to create a stored procedure named spDeleteCategory to delete records in the database. The stored procedure must meet the following requirements: * Delete records in both the BlogEntry and BlogCategory tables where CategoryId equals parameter @CategoryId. * Avoid locking the entire table when deleting records from the BlogCategory table. * If an error occurs during a delete operation on either table, all changes must be rolled back, otherwise all changes should be committed. How should you complete the procedure? To answer, select the appropriate Transact-SQL segments in the answer area. **Answer:** Explanation: Explanation Box 1: SET TRANSACTION ISOLATION LEVEL READ COMMITTED You can minimize locking contention while protecting transactions from dirty reads of uncommitted data modifications by using either of the following: * The READ COMMITTED isolation level with the READ_COMMITTED_SNAPSHOT database option set ON. * The SNAPSHOT isolation level. With ROWLOCK we should use READ COMMITTED Box 2: ROWLOCK Requirement: Avoid locking the entire table when deleting records from the BlogCategory table ROWLOCK specifies that row locks are taken when page or table locks are ordinarily taken. When specified in transactions operating at the SNAPSHOT isolation level, row locks are not taken unless ROWLOCK is combined with other table hints that require locks, such as UPDLOCK and HOLDLOCK. Box 3: COMMIT Box 4: ROLLBACK

NEW QUESTION: 2 Your customer service agents use two custom entities named Entity 1 and Entity 2. You need to organize the records for Entity 1 and Entity 2 so that they appear together in a single location. What should you do first? **A.** Create a system view. **B.** Enable the entities for access teams. **C.** Enable the entities for queues. **D.** Create a personal view. **Answer: A**

NEW QUESTION: 3 Which statement is correct about a Java EE client of a message-driven bean? **A.** The client can use JNDI to obtain a reference to a message destination. **B.** The client can use JNDI to obtain a reference to a dependency injection. **C.** The client can use JNDI to obtain a reference to a message-driven bean instance. **D.** The client can use JNDI to look up a reference to the message-driven bean's home interface. **Answer: A**

NEW QUESTION: 4 An application developer uses the stagingprop utility to propagate staged data and managed files from the production-ready data to the production server. The value specified for consolidationSize is "x" in a staged table A whose total number of unprocessed records in the STAGLOG table is "z". The developer does NOT set the -scope to _all_. Which of the following conditions must be met if A's entire set of unprocessed records in the STAGLOG table is fetched once? **A.** Parameter "n" must be used with the -transaction option **B.** $z \leq x$ **C.** Filter option must be used **D.** $z > x$ **Answer: A**
