NEW QUESTION: 4Your network contains an Active Directory forest.The forest contains one domain named contoso.com.You discover the following event in the Event log of domain controllers: "The request for a new account-identifier pool failed. The operation will be retried until the request succeeds. The error is " %1 ""You need to ensure that the domain controllers can acquire new account-identifier pools successfully.What should you do?
A. Move the RID master role.
B. Move the bridgehead server.
C. Move the global catalog server.
D. Deploy an additional global catalog server.
E. Move the PDC emulator role.
F. Move the infrastructure master role.
G. Install a read-only domain controller (RODC).
H. Move the domain naming master role.
I. Move the schema master role.
J. Restart the Active Directory Domain Services (AD DS) service.
Answer: A
Explanation: This error can occur when the server holding the RID master role is not available to provide a new RID pool. Moving the RID master role to another domain controller will resolve this.
Reference:

<http://technet.microsoft.com/en-us/library/cc756699.aspx>Event ID 16651 - RID Pool Request
Users, computers, and groups stored in Active Directory are collectively known as security principals. Each security principal is assigned a unique alphanumeric string called a SID. The SID includes a domain prefix identifier that uniquely identifies the domain and a relative identifier (RID) that uniquely identifies the security principal within the domain. The RID is a monotonically increasing number at the end of the SID.Each domain controller is assigned a pool of RIDs from the global RID pool by the domain controller that holds the RID master role (also known as flexible single master operations or FSMO) in each Active Directory domain. The RID master (also known as the RID pool manager, RID manager, or RID operations master) is

responsible for issuing a unique RID pool to each domain controller in its domain. By default, RID pools are obtained in increments of 500. (...) Newly promoted domain controllers must acquire a RID pool before they can advertise their availability to Active Directory clients or share the SYSVOL. Existing domain controllers require additional RID allocations in order to continue creating security principals when their current RID pool becomes depleted. Event Details Message The request for a new account-identifier pool failed. The operation will be retried until the request succeeds. The error is " %1 "ResolveCheck connectivity to the RID master, and check its replication status A relative ID (RID) pool was not allocated to the local domain controller. Ensure that the local domain controller can communicate with the domain controller that is identified as the RID operations master. Ensure that the RID master is online and replicating to other domain controllers.
