会社XYZは、より多くのクラウドベースのビジネスツールを使用していることに気づき、パスワード管理が面倒になっています。セキュリティは会社にとって重要です。その結果、パスワードの複製と共有アカウントは受け入れられません。次の実装のうち、集中認証を使用した分散ログインに対応し、SaaSベンダー間で互換性のあるものはどれですか。 **A.**

SAMLをサポートするクラウドベースの認証サービスを確立します。 **D.**

フェデレーション用に企業DMZに読み取り専用のActive

Directoryサーバーをインストールします。 **Answer: C** Explanation: There is widespread adoption of SAML standards by SaaS vendors for single sign-on identity management, in response to customer demands for fast, simple and secure employee, customer and partner access to applications in their environments. By eliminating all passwords and instead using digital signatures for authentication and authorization of data access, SAML has become the Gold Standard for single sign-on into cloud applications. SAML-enabled SaaS applications are easier and quicker to user provision in complex enterprise environments, are more secure and help simplify identity management across large and diverse user communities. Security Assertion Markup Language (SAML) is an XML-based, open-standard data format for exchanging authentication and authorization data between parties, in particular, between an identity provider and a service provider. The SAML specification defines three roles: the principal (typically a user), the Identity provider (IdP), and the service provider (SP). In the use case addressed by SAML, the principal requests a service from the service provider. The service

provider requests and obtains an identity assertion from the identity provider. On the basis of this assertion, the service provider can make an access control decision ?in other words it can decide whether to perform some service for the connected principal.
