You have a form-level On-Error trigger that traps errors that apply to the form in general, but you additionally code an item-level On-Error trigger for the Salary item. When testing the form, you find that the general errors are not trapped when you navigate from the Salary item. What can you do to correct this problem? **A.** Call the form level On-Error trigger from the item-level On-Error trigger. **B.** Change the Execution Hierarchy property for the form-level On-Error trigger. **C.** Move all the code to a PL/SQL program unit and call it from both the form level and item level On-Error triggers. **D.** Change the Execution Hierarchy property for the item-level On-Error trigger. **E.** Call the item-level On-Error trigger from the form-level On-Error trigger. **Answer: D** Explanation: Explanation: when you have a WHEN-NEW-ITEM-INSTANCE :if you create a trigger on item, block and form-level, then only the ITEM-Level will start. If you use the exec-hierarchy Override. If all trigger use After, then the FORM, BLOCK and ITEM starts in that sequence.
