NEW QUESTION: 1 The nurse is teaching a client how to perform monthly testicular self-examination (TSE) and states that it is best to perform the procedure right after showering. This statement is made by the nurse based on the knowledge that:**A.** The scrotum will be softer and more relaxed after a warm shower, making the testicles easier to palpate**B.** The client is more likely to remember to perform the TSE when in the nude**C.** When the scrotum is exposed to cool temperatures, the testicles become large and bulky**D.** The examination will be less painful at this time**Answer: A**Explanation:Explanation/Reference:Explanation:(A) Nudity is not a trigger for reminding males to perform TSE. (B) Testicles become more firm when exposed to cool temperatures, but not large and bulky. (C) The testicles will be lower and more easily palpated with warmer temperatures. A protective mechanism of the body to protect sperm production is for the scrotum to pull closer to the body when exposed to cooler temperatures. (D) The examination should not be painful.

NEW QUESTION: 2 Identify the scenarios in which the RMAN CROSSCHECR command is useful. (Choose all that apply.)**A.** To update the RMAN repository if you delete archived redo logs with operating system commands.**B.** To check that the obsolete backups are deleted from the repository records and from the disk.**C.** To synchronize the actual files on disk or in the media management catalog with the RMAN repository for which the backup was not taken using RMAN.**D.** To update outdated information about backups that disappeared from disk or tape or became corrupted and inaccessible.**Answer: A,D**Explanation:Explanation/Reference:Explanation:Crosscheck are useful because they can do the following: (Link)Update outdated information about backups that disappeared from disk or tape or became corruptedUpdate the repository if you delete archived redo logs or other files with operating system commandsUse the CROSSCHECK command to synchronize the physical reality of backups and copies with their logical records in the RMAN repository.The CROSSCHECK command checks only objects marked AVAILABLE or EXPIRED in the repository by examining the files on disk for DISK channels or by querying the media manager for sbt channels.Meaning of Crosscheck Status: EXPIREDObject is not found either in file system (for DISK) or in the media manager (for sbt). A backup set is EXPIRED if any backup piece in the set is EXPIRED.The CROSSCHECK command

does not delete the repository records of the files that it does not find, but updates their repository records to EXPIRED. You can run DELETE EXPIRED to remove the repository records for expired files and any existing physical files whose status is EXPIRED.If backups are EXPIRED, then you can re-execute the crosscheck later and determine whether expired backups are available. This precaution is especially useful when you use RMAN with a media manager.For example, if some backup pieces or copies were erroneously marked as EXPIRED because the PARMS channel settings were incorrect, then after ensuring that the files really do exist in the media manager, run the CROSSCHECK BACKUP command again to restore those files to AVAILABLE status.AVAILABLEObject is available for use by RMAN. For a backup set to be AVAILABLE, all backup pieces in the set must have the status AVAILABLE.

NEW QUESTION: 3 You need to recommend a solution that meets the security requirements for protecting users.What should you recommend?**A.** From the Security & Compliance admin center, create an ATP safe attachments policy.**B.** From the Security & Compliance admin center, create an ATP Safe Links policy.**C.** From the Security & Compliance admin center, create an ATP anti-phishing policy.**D.** From the Exchange admin center in Exchange Online, create a spam filter policy.**Answer: B**Explanation:ExplanationAll users must be protected from accessing unsecure websites when they click on URLs embedded in email messages.
