NEW QUESTION: 3 Given:
class Car implements TurboVehicle, Steerable {
// Car methods
> interface Convertible {
// Convertible methods
} public class SportsCar extends Car implements Convertible {
} Which statement is true?
A. SportsCar must implement methods define by convertible.
B. SportsCar must override methods defined by car.
C. Instances of car can invoke convertible methods.
D. SportsCar must implement methods from TurboVehicle and steerable
Answer: A
Explanation: To declare a class that implements an interface, you include an implements clause in the class declaration. By convention, the implements clause follows the extends clause, if there is one. Here are the some point that must be considered while implementing an interface (or interfaces) into a java class. A class implementing an interface must either implement all the methods of that interface otherwise known as the abstract class. A class in java may extend at most one superclass because java does not allow multiple inheritance, by it may implement more than one interface. Multiple inheritance in java is achieved through the interfaces. When a class implements more than one interface then implement statement requires a comma-separated list of interfaces to be implement by that class.
