**NEW QUESTION: 1**You are a network administrator of an Active Directory domain named contoso.com.You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the DHCP Server server role and the Network Policy Server role service installed.You enable Network Access Protection (NAP) on all of the DHCP scopes on Server1.You need to create a DHCP policy that will apply to all of the NAP non-compliant DHCP clients.Which criteria should you specify when you create the DHCP policy?**A.** The relay agent information**B.** The user class**C.** The vendor class**D.** The client identifier**Answer: B****Explanation:**To configure a NAP-enabled DHCP server\* On the DHCP server, click Start, click Run, in Open, type dhcpcmgmt. smc, and then press ENTER.\* In the DHCP console, open <servername>IPv4.\* Right-click the name of the DHCP scope that you will use for NAP client computers, and then click Properties.\* On the Network Access Protection tab, under Network Access Protection Settings, choose Enable for this scope, verify that Use default Network Access Protection profile is selected, and then click OK.\* In the DHCP console tree, under the DHCP scope that you have selected, right- click Scope Options, and then click Configure Options.\* On the Advanced tab, verify that Default User Class is selected next to User class.\* Select the 003 Router check box, and in IP Address, under Data entry, type the IP address for the default gateway used by compliant NAP client computers, and then click Add.\* Select the 006 DNS Servers check box, and in IP Address, under Data entry, type the IP address for each router to be used by compliant NAP client computers, and then click Add.\* Select the 015 DNS Domain Name check box, and in String value, under Data entry, type your organization's domain name (for example, woodgrovebank. local), and then click Apply. This domain is a full-access network assigned to compliant NAP clients.\* On the Advanced tab, next to User class, choose Default Network Access Protection Class.\* Select the 003 Router check box, and in IP Address, under Data entry, type the IP address for the default gateway used by noncompliant NAP client computers, and then click Add. This can be the same default gateway that is used by compliant NAP clients.\* Select the 006 DNS Servers check box, and in IP Address, under Data entry, type the IP address for each DNS server to be used by noncompliant

NAP client computers, and then click Add. These can be the same DNS servers used by compliant NAP clients.\* Select the 015 DNS Domain Name check box, and in String value, under Data entry, type a name to identify the restricted domain (for example, restricted.Woodgrovebank.local), and then click OK. This domain is a restricted-access network assigned to noncompliant NAP clients.\* Click OK to close the Scope Options dialog box.\* Close the DHCP console.Reference: <http://technet.microsoft.com/en-us/library/dd296905%28v=ws.10%29.aspx>

**NEW QUESTION: 2** A Solutions Architect is redesigning an image-viewing and messaging platform to be delivered as SaaS. Currently, there is a farm of virtual desktop infrastructure (VDI) that runs a desktop image-viewing application and a desktop messaging application. Both applications use a shared database to manage user accounts and sharing. Users log in from a web portal that launches the applications and streams the view of the application on the user's machine. The Development Operations team wants to move away from using VDI and wants to rewrite the application. What is the MOST cost-effective architecture that offers both security and ease of management?  
**A.** Run a website from an Amazon S3 bucket with a separate S3 bucket for images and messaging data. Call AWS Lambda functions from embedded JavaScript to manage the dynamic content, and use Amazon Cognito for user and sharing management.  
**B.** Run a website as an AWS Elastic Beanstalk application, storing the images in Amazon S3, and using an Amazon RDS database for user accounts and sharing. Create AWS CloudFormation templates to launch the application and perform blue/green deployments.  
**C.** Run a website from an Amazon S3 bucket that authorizes Amazon AppStream to stream applications for a combined image viewer and messenger that stores images in Amazon S3. Have the website use an Amazon RDS database for user accounts and sharing.  
**D.** Run a website from Amazon EC2 Linux servers, storing the images in Amazon S3, and use Amazon Cognito for user accounts and sharing. Create AWS CloudFormation templates to launch the application by using EC2 user data to install and configure the application.  
**Answer: A**

**NEW QUESTION: 3** A company's web application is using multiple Linux Amazon EC2 instances and storing data on Amazon EBS volumes. The company is looking for a solution to increase the resiliency of the application in case of a failure and to provide storage that complies with atomicity, consistency, isolation, and durability (ACID). What should a solutions architect do to meet these requirements?  
**A.** Launch the application on EC2 instances in each Availability Zone. Attach EBS volumes to each EC2 instance.  
**B.** Create an Application Load Balancer with Auto Scaling groups across multiple Availability Zones. Mount an instance store on each EC2 instance.  
**C.** Create an Application Load Balancer with Auto Scaling groups across multiple Availability Zones. Store data using Amazon S3 One Zone-Infrequent Access (S3 One Zone-IA).  
**D.** Create an Application Load Balancer with Auto Scaling groups across multiple Availability Zones. Store data on Amazon EFS and mount a target on each instance.  
**Answer: D**  
**Explanation:** Explanation: How Amazon EFS Works with Amazon EC2 The following illustration shows an example VPC accessing an Amazon EFS file system. Here, EC2 instances in the VPC have file systems mounted. In this illustration, the VPC has three Availability Zones, and each has one mount target created in it. We recommend that you access the file system from a mount target within the same Availability Zone. One of the Availability Zones has two subnets. However, a mount target is created in only one of the subnets.  
**Benefits of Auto Scaling**  
Better fault tolerance. Amazon EC2 Auto Scaling can detect when an instance is unhealthy, terminate it, and launch an instance to replace it. You can also configure Amazon EC2 Auto Scaling to use multiple Availability Zones. If one Availability Zone becomes unavailable, Amazon EC2 Auto Scaling can launch instances in another one to compensate.  
Better availability. Amazon EC2 Auto Scaling helps ensure that your application always has the right amount of capacity to handle the current traffic demand.  
Better cost management. Amazon EC2 Auto Scaling can dynamically increase and decrease capacity as needed. Because you pay for the EC2 instances you use, you save money by launching instances when they are needed and terminating them when they

aren't.<https://docs.aws.amazon.com/efs/latest/ug/how-it-works.html#how-it-works-ec2>

**NEW QUESTION: 4** Which of the following represents the reason why post-contract evaluations are important?  
**A.** It establishes a historical base for contractor selection.  
**B.** The contract fee is contractor performance related.  
**C.** It acts as a point of reference for making legal procurements.  
**D.** Most contracts make them a necessity.  
**E.** They are legally required in many jurisdictions.  
**Answer: A**
