NEW QUESTION: 1An administrator needs to quickly deploy Windows 7 to several new computers without pre-configured operating systems. The administrator decides to use an existing Ghost image since the necessary drivers have already been added to the Deploy Anywhere database. The Network Boot Services configuration is set to respond only to known computers. How should the administrator proceed?**A.** Import the list of new computers into the Management Console and assign an imaging task**B.** Deploy an Automation Folder to the new computers to prepare them for imaging**C.** Configure NBS to respond to a known list of MAC addresses and deploy the images only to the new systems**D.** Use an Initial Deployment Event to distribute the image as the computers boot to the network**Answer: C**

NEW QUESTION: 2Which three statements are true configuration files and the behavior of module parameters specified in those files, in the /etc/modprobe.d directory?**A.** The file may contain instructions to ignore certain modules.**B.** The file may contain shell commands to be run instead of inserting a particular module in the kernel.**C.** The files may contain options to be passed to a module only when it is Inserted using an insmod command.**D.** The files may contain options to be passed to a module, only when it is inserted using a modprobe command.**E.** The files may contain alias names for modules.**F.** The files may contain options to be passed to a module only when it is a dependency of a module being inserted.**Answer: D,E,F****Explanation:** modprobe.d - Configuration directory for modprobe Because the modprobe command can add or remove more than one module, due to modules having dependencies, we need a method of specifying what options are to be used with those modules (A). All files underneath the /etc/modprobe.d directory which end with the .conf extension specify those options as required. They can also be used to create convenient aliases (D): alternate names for a module, or they can override the normal modprobe behavior altogether for those with special requirements (such as inserting more than one module).C: options modulename option... This command allows you to add options to the module modulename (which might be an alias) every time it is inserted into the kernel: whether directly (using modprobemodulename or because the module being inserted depends on this module.
