(3つ選択してください。) **A.** サポート参照 **B.** 会計日 **C.** アカウトルール **D.** 仕訳明細ルール **E.** 勘定体系 **Answer: A,C,D**

NEW QUESTION: 2 **A.** **0B.** **1C.** **2D.** **3E.** **4F.** **5** **Answer: C**

NEW QUESTION: 3 **HOTSPOT** **Answer:** Explanation:Explanation:When organizations deploy their own public key infrastructure (PKI) and install a private trusted root CA, their CA automatically sends its certificate to all domain member computers in the organization. The domain member client and server computers store the CA certificate in the Trusted Root Certification Authorities certificate store. After this occurs, the domain member computers trust certificates that are issued by the organization trusted root CA. For example, if you install AD CS, the CA sends its certificate to the domain member computers in your organization and they store the CA certificate in the Trusted Root Certification Authorities certificate store on the local computer. If you also configure and autoenroll a server certificate for your NPS servers and then deploy PEAP-MS-CHAP v2 for wireless connections, all domain member wireless client computers can successfully authenticate your NPS servers using the NPS server certificate because they trust the CA that issued the NPS server certificate. On computers that are running the Windows operating system, certificates that are installed on the computer are kept in a storage area called the certificate store. The certificate store is accessible using the Certificates

Microsoft Management Console (MMC) snap-in. This store contains multiple folders, where certificates of different types are stored. For example, the certificate store contains a Trusted Root Certification Authorities folder where the certificates from all trusted root CAs are kept. When your organization deploys a PKI and installs a private trusted root CA using AD CS, the CA automatically sends its certificate to all domain member computers in the organization. The domain member client and server computers store the CA certificate in the Trusted Root Certification Authorities folder in the Current User and the Local Computer certificate stores. After this occurs, the domain member computers trust certificates that are issued by the trusted root CA. Similarly, when you autoenroll computer certificates to domain member client computers, the certificate is kept in the Personal certificate store for the Local Computer. When you autoenroll certificates to users, the user certificate is kept in the Personal certificate store for the Current User. References: <http://technet.microsoft.com/en-us/library/cc730811.aspx>
